Sanitas™ v.9.6.37 Groundwater Stats Consulting. UG
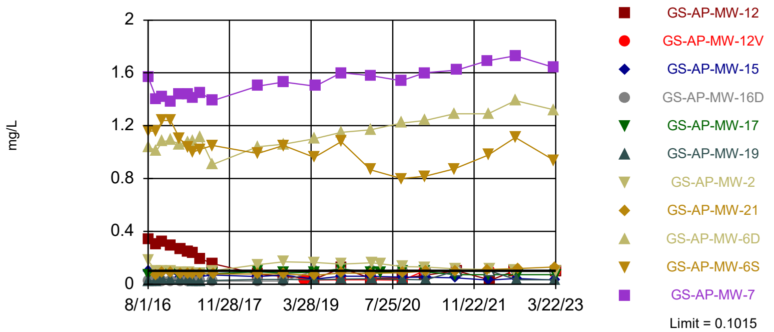
Hollow symbols indicate censored values.

Exceeds Limit: GS-AP-MW-21, GS-AP-MW-6D, GS-AP-MW-6S, GS-AP-MW-7

Prediction Limit

Interwell Non-parametric



Limit = 0.1015

Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 41 background values. 75.61% NDs. Annual per-constituent alpha = 0.02317. Individual comparison alpha = 0.001065 (1 of 2). Comparing 11 points to limit.

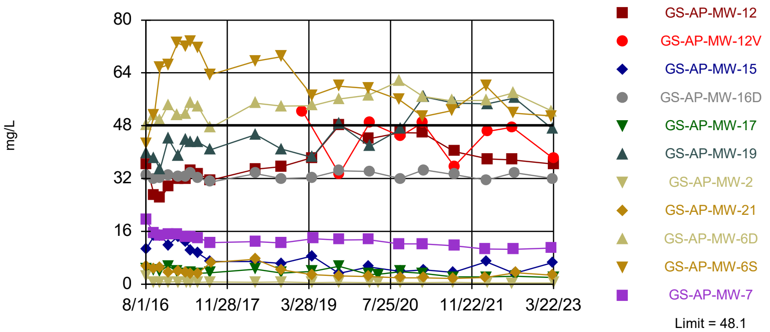
Prediction Limit

Interwell Non-parametric



Limit = 48.1

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Wilk normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 41 background values. Annual per-constituent alpha = 0.02317. Individual comparison alpha = 0.001065 (1 of 2). Comparing 11 points to limit.

Re: Plant Gorgas Ash Pond
2nd Semi-Annual Statistical Analysis – September 2023 Sample Event

Dear Mr. Budd,

Groundwater Stats Consulting, formerly the statistical consulting division of Sanitas Technologies, is pleased to provide the statistical analysis of groundwater data for the 2nd Semi-Annual September 2023 sample event for Alabama Power Company's Plant Gorgas Ash Pond. The analysis complies with the federal rule for the Disposal of Coal Combustion Residuals (CCR) from Electric Utilities (CCR Rule, 2015) as well as with the United States Environmental Protection Agency Unified Guidance (2009).

Sampling began at site for the CCR program in 2016. The monitoring well network, as provided by Southern Company Services, consists of the following:

- **Upgradient wells:** GS-AP-MW-8, GS-AP-MW-13, GS-AP-MW-17V, and GS-AP-MW-18R
- **Downgradient wells:** GS-AP-MW-1R, GS-AP-MW-2, GS-AP-MW-3, GS-AP-MW-3V, GS-AP-MW-5R, GS-AP-MW-6S, GS-AP-MW-6D, GS-AP-MW-7, GSA-AP-MW-9R, GS-AP-MW-9V, GS-AP-MW-10R, GS-AP-MW-11R, GS-AP-MW-12, GS-AP-MW-12V, GS-AP-MW-13R, GS-AP-MW-14R, GS-AP-MW-15, GS-AP-MW-15V, GS-AP-MW-16D, GS-AP-MW-17, GS-AP-MW-18VR, GS-AP-MW-19, GS-AP-MW-21, GS-AP-MW-21V, GS-AP-MW-45V, GS-AP-MW-46, and GS-AP-MW-47
- **Delineation wells:** GS-AP-PZ-16, GS-AP-PZ-18R, GS-AP-PZ-22, GS-AP-MW-23H, GS-AP-MW-23V, GS-AP-MW-24H, GS-AP-MW-25HA, GS-AP-MW-26H, GS-AP-MW-27HR, GS-AP-MW-28H, GS-AP-MW-29H, GS-AP-MW-30HA, GS-AP-MW-31H, GS-AP-MW-31V, GS-AP-MW-32H, GS-AP-MW-33HO,

GS-AP-MW-34HO, GS-AP-MW-35HO, GS-AP-MW-36H, GS-AP-MW-36V, GS-AP-MW-37HR, GS-AP-MW-38H, GS-AP-MW-39H, GS-AP-MW-40HO, GS-AP-MW-41HD, GS-AP-MW-41HS, GS-AP-MW-42H, GS-AP-MW-43HO, GS-AP-MW-44HO, and GS-AP-MW-6V

  - **Piezometers:** GS-AP-MW-1, GS-AP-MW-4, GS-AP-MW-7V, GS-AP-MW-7VR, GS-AP-MW-16S, GS-AP-MW-20, GS-AP-MW-25H, GS-AP-MW-27H, GS-AP-MW-30H, and GS-AP-MW-30HS

Note that data from delineation wells were plotted on time series graphs and box plots, but do not require formal statistics. Additionally, the list of piezometers is included above for recordkeeping purposes, but data are not analyzed in this analysis.

The following downgradient and delineation wells were added to the network after 2016:

- **2019 Downgradient Wells:** GS-AP-MW-9V, GS-AP-MW-15V, and GS-AP-MW-21V
- **2021 Downgradient Wells:** GS-AP-MW-1R, GS-AP-MW-3V, GS-AP-MW-5R, GS-AP-MW-9R, GS-AP-MW-10R, GS-AP-MW-11R, GS-AP-MW-13R, GS-AP-MW-18VR, GS-AP-MW-45V, GS-AP-MW-46, and GS-AP-MW-47
- **2021 Delineation Wells:** GS-AP-PZ-18R, GS-AP-MW-23V, GS-AP-MW-27HR, GS-AP-MW-31V, GS-AP-MW-36V, and GS-AP-MW-37HR

Data from these newer wells are plotted on the time series graphs and box plots. Statistical analyses for new downgradient wells are performed for Appendix III constituents when the minimum required 8 samples are available and for Appendix IV constituents when the minimum 4 samples are available.

Upgradient well GS-AP-MW-13 was abandoned in April 2019; however, data from this well is used for constructing interwell statistical limits as historical concentrations represent the groundwater quality upgradient of the facility. Additionally, new upgradient well GS-AP-MW-18R, which was first sampled in has been sampled at least four times. Data from both of these upgradient wells are plotted on the time series graphs and box plots and are used for the purpose of constructing statistical limits.

Data were sent electronically to Groundwater Stats Consulting, and the statistical analysis was prepared according to the Statistical Analysis Plan approved by Dr. Kirk Cameron, PhD Statistician with MacStat Consulting, primary author of the USEPA Unified Guidance, and Senior Advisor to Groundwater Stats Consulting. The analysis was reviewed by Andrew Collins, Project Manager of Groundwater Stats Consulting.

The CCR program consists of the following constituents:

> **Appendix III** (Detection Monitoring) - boron, calcium, chloride, fluoride, pH, sulfate, and TDS
> **Appendix IV** (Assessment Monitoring) - antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, combined radium 226 + 228, fluoride, lead, lithium, mercury, molybdenum, selenium, and thallium

Note that when there are no detections present in downgradient wells for a given constituent, statistical analyses are not required. A list of Appendix IV downgradient well/constituent pairs containing 100% non-detects follows this letter.

Time series plots for Appendix III and IV parameters at all wells are provided for the purpose of screening data at these wells (Figure A). A substitution of the most recent reporting limit is used for non-detect data. Additionally, a separate section of box plots is included for all constituents at upgradient and downgradient wells (Figure B). The time series plots are used to initially screen for suspected outliers and trends, while the box plots provide visual representation of variation within individual wells and between all wells.

In earlier analyses, data at all wells were evaluated for the following: 1) outliers; 2) trends; 3) most appropriate statistical method for Appendix III parameters based on analysis of the spatial variability of groundwater quality data among wells upgradient of the facility; and 4) eligibility of downgradient wells when intrawell statistical methods are recommended. Power curves are provided in this report to demonstrate that the selected statistical methods for Appendix III parameters comply with the USEPA Unified Guidance. The EPA suggests that the selected statistical method should provide at least 55% power at 3 standard deviations or at least 80% power at 4 standard deviations. Power curves are based on the following statistical methods and site/data characteristics:

- Semi-Annual Sampling
- Interwell Prediction Limits with 1-of-2 resample plan
- # Background Samples: 47
- # Constituents: 7
- # Downgradient wells: 14

Summary of Statistical Methods – Appendix III Parameters

Based on the earlier evaluation described above, the following statistical methods were selected:

- Interwell prediction limits, combined with a 1-of-2 resample plan for boron, calcium, chloride, fluoride, pH, sulfate, and TDS

Parametric prediction limits are utilized when the screened historical data follow a normal or transformed-normal distribution. When data cannot be normalized or the majority of data are non-detects, a nonparametric test is utilized. While the annual false positive rate associated with parametric limits is fixed at 10% as recommended by the EPA Unified Guidance (2009), the false positive rate associated with nonparametric limits is not fixed and depends upon the available background sample size, number of future comparisons, and verification resample plan. The distribution of data is tested using the Shapiro-Wilk/Shapiro-Francia test for normality. After testing for normality and performing any adjustments as discussed below (US EPA, 2009), data are analyzed using either parametric or non-parametric prediction limits as appropriate.

- No statistical analyses are required on wells and analytes containing 100% non-detects (USEPA Unified Guidance, 2009, Chapter 6).
- When data contain <15% non-detects, simple substitution of one-half the reporting limit is utilized in the statistical analysis. The reporting limit utilized for non-detects is the most recent practical quantification limit (PQL) as reported by the laboratory.
- When data contain between 15-50% non-detects, the Kaplan-Meier non-detect adjustment is applied to the background data for parametric limits. This technique adjusts the mean and standard deviation of the historical concentrations to account for concentrations below the reporting limit.
- Nonparametric prediction limits are used on data containing greater than 50% non-detects.

Natural systems continuously evolve due to physical changes made to the environment. Examples include capping a landfill, paving areas near a well, or lining a drainage channel to prevent erosion. Periodic updating of background statistical limits is necessary to accommodate these types of changes. In the interwell case, prediction limits are updated with upgradient well data following each sampling event after screening for any new outliers. While not required for this report, in some cases, deselecting the earlier portion of data may be necessary prior to construction of limits so that resulting statistical limits are conservative (lower) from a regulatory perspective and capable of rapidly detecting changes in groundwater quality. Even though the data are excluded from the calculation, the values will continue to be reported and shown in tables and graphs.

Background Update Summary – Conducted in September 2023

Interwell prediction limits, which compare the most recent sample from each downgradient well to statistical limits constructed from pooled upgradient well data, are updated during each sample event. Data from upgradient wells are periodically re-screened for newly developing trends, which may require adjustment of the background period to eliminate the trend, as well as for outliers over the entire record. The formal screening, which was conducted during this analysis, is described below. As discussed in the Statistical Analysis Plan (August 2020), interwell prediction limits are used to evaluate boron, calcium, chloride, fluoride, sulfate, pH, and TDS.

Outlier Analysis

Prior to performing prediction limits, proposed background data through September 2023 were reviewed to identify any newly suspected outliers at upgradient wells for boron, calcium, chloride, fluoride, pH, sulfate, and TDS. Both Tukey's Test and visual screening are used to identify potential outliers. Tukey's outlier test did not identify any potential outliers among upgradient wells for Appendix III parameters; therefore, no values were flagged as outliers (Figure C).

During this analysis, a previously flagged value for boron at downgradient well GS-AP-MW-21 was unflagged since remaining concentrations within this well were of similar value and was no longer deemed spurious. Since this value is from a downgradient well, it does not have any impact on generating interwell statistical limits.

When present, outliers are flagged with "o" and excluded to reduce variation, better represent background conditions, and provide limits that are conservative from a regulatory perspective. As mentioned above, flagged data are displayed in a lighter font and as a disconnected symbol on the time series reports, as well as in a lighter font on the accompanying data pages. A summary of Tukey's test results follows this letter (Figure C).

Trend Test Evaluation

The Sen's Slope/Mann Kendall trend test was used to evaluate the entire record of data from upgradient wells for all parameters which utilize interwell prediction limits to see if concentrations are increasing, decreasing, or stable at the 99% confidence level (Figure D). Note that upgradient well GS-AP-MW-18R was not included in any trend test evaluations because this well has been sampled a maximum of 4 times and a minimum of 6 samples are required for Sen's Slope/Mann Kendall trend test to achieve meaningful results. When statistically significant increasing trends are identified in upgradient wells, the earlier portion of data is deselected prior to construction of interwell statistical limits if the trending data would result in statistical limits that are not conservative from a regulatory perspective. Statistically significant trends were noted for the following well/constituent pairs:

Increasing:
- Chloride: GS-AP-MW-8
- Fluoride: GS-AM-MW-13

Decreasing:
- None

No adjustments were required, however, because the magnitudes of the trends were low relative to the average concentrations in background. A summary of the results follows this letter.

Evaluation of Appendix III Parameters – September 2023

Background (upgradient) well data were re-assessed for potential outliers through visual screening and Tukey's outlier test during this analysis and no values were identified; therefore, no additional values were flagged. Values in background which have been flagged as outliers may be seen in a lighter font and as a disconnected symbol on the graphs. A summary of previously flagged outliers follows this report (Figure C).

Interwell Prediction Limits

Interwell prediction limits combined with a 1-of-2 verification strategy were constructed for boron, calcium, chloride, fluoride, sulfate, pH, and TDS (Figure E). Interwell prediction limits pool upgradient well data through September 2023 to establish a background limit for an individual constituent. The September 2023 sample from each downgradient well is compared to the background limits to determine whether initial exceedances are present.

In the event of an initial exceedance of compliance well data, the 1-of-2 resample plan allows for collection of one additional sample to determine whether the initial exceedance is confirmed. When the resample confirms the initial exceedance, a statistically significant increase (SSI) is identified, and further research is required to identify the cause of the exceedance (i.e., impact from the site, natural variation, or an off-site source). If a resample falls within the statistical limit, the initial exceedance is considered to be a false positive result; therefore, no further action is necessary. A summary of the prediction limit results may be found in the Prediction Limit Summary tables following this letter. Exceedances for interwell prediction limits were identified for several well/constituent pairs:

- Boron: GS-AP-MW-6D, GS-AP-MW-6S, GS-AP-MW-7, GS-AP-MW-21, and GS-AP-MW-21
- Calcium: GS-AP-MW-6D, GS-AP-MW-6S, GS-AP-MW-9V and GS-AP-MW-19
- Chloride: GS-AP-MW-2, GS-AP-MW-6D, GS-AP-MW-6S, GS-AP-MW-7, GS-AP-MW-9V, GS-AP-MW-12V, GS-AP-MW-15, GS-AP-MW-15V, GS-AP-MW-17, GS-AP-MW-19, GS-AP-MW-21, and GS-AP-MW-21V
- Fluoride: GS-AP-MW-2, GS-AP-MW-15, and GS-AP-MW-21V
- pH: GS-AP-MW-2, GS-AP-MW-12, GS-AP-MW-12V, GS-AP-MW-15, GS-AP-MW-17, and GS-AP-MW-21
- Sulfate: GS-AP-MW-6D, GS-AP-MW-6S, GS-AP-MW-7, GS-AP-MW-9V, GS-AP-MW-15V, GS-AP-MW-21, and GS-AP-MW-21V
- TDS: GS-AP-MW-2, GS-AP-MW-9V, GS-AP-MW-15, GS-AP-MW-15V, GS-AP-MW-17, GS-AP-MW-21, and GS-AP-MW-21V

Trend Test Evaluation

When prediction limit exceedances are identified in downgradient wells, data are further evaluated using the Sen’s Slope/Mann Kendall trend test to determine whether concentrations are statistically increasing, decreasing, or stable at the 99% confidence level (Figure E). Upgradient wells are included in the trend analyses for all parameters found to exceed their prediction limit in downgradient wells to identify whether similar patterns exist upgradient of the site. The existence of similar trends in both upgradient and downgradient wells is an indication of natural variability in groundwater that is unrelated to practices at the site. As mentioned above, upgradient well GS-AP-MW-18R was not included with any trend test evaluations. A summary of the trend test results follows this letter. Statistically significant trends were identified for the following well/constituent pairs:

Increasing:

- Boron: GS-AP-MW-6D and GS-AP-MW-7
- Calcium: GS-AP-MW-6D, GS-AP-MW-9V, and GS-AP-MW-19
- Chloride: GS-AP-MW-6D, GS-AP-MW-7, GS-AP-MW-8 (upgradient), GS-AP-MW-9V, and GS-AP-MW-21
- Fluoride: GS-AP-MW-13 (upgradient)
- pH: GS-AP-MW-12 and GS-AP-MW-15
- Sulfate: GS-AP-MW-9V and GS-AP-MW-21
- TDS: GS-AP-MW-21

Decreasing:

- Chloride: GS-AP-MW-19
- Fluoride: GS-AP-MW-2
- Sulfate: GS-AP-MW-6S and GS-AP-MW-15V
- TDS: GS-AP-MW-2

As mentioned above, upgradient well GS-AP-MW-13 has been abandoned since 2019 but is included as a reference for historic upgradient concentrations.

Evaluation of Appendix IV Parameters – September 2023

Prior to evaluating Appendix IV parameters, upgradient well data were screened through visual screening and Tukey's outlier test for potential outliers and extreme trending patterns that would lead to artificially elevated statistical limits. A discussion of those findings is provided below.

Tukey's outlier test on pooled upgradient well data for Appendix IV parameters through September 2023 identified values for combined radium 226 + 228. The highest value for combined radium 226 + 228 at upgradient well GS-AP-MW-17V was flagged in order to construct statistical limits that are conservative from a regulatory perspective. All remaining measurements were similar to concentrations within each respective well and were not flagged as outliers.

Additionally, downgradient well data through September 2023 were screened through visual screening using time series graphs. Since the downgradient well data are used to construct confidence intervals, a regulatory conservative approach is taken in that values that are marginally high relative to the rest of the data are retained unless there is particular justification for excluding them. No outliers were flagged among downgradient wells for Appendix IV parameters. A summary of flagged outliers follows this report (Figure C).

Interwell Upper Tolerance Limits

Background limits were determined using upper tolerance limits (UTLs) constructed from pooled upgradient well data through September 2023. The tolerance limits contain a known fraction (coverage) of the background population with a known level of confidence. The tolerance limits contain a known fraction (coverage) of the background population with a known level of confidence. As requested by ADEM to eliminate variation among screened upgradient well data, nonparametric tolerance limits, which use the highest value in background as the statistical limit, were constructed (Figure G). A summary of the upper tolerance limits follows this letter. The confidence and coverage levels for nonparametric tolerance limits are dependent upon the number of background samples.

Groundwater Protection Standards

These background limits were then compared to the Maximum Contaminant Levels (MCLs) for each parameter, and the higher of the two was used as the GWPS (Figure H) in the confidence interval comparisons described below.

In accordance with Alabama Department of Environmental Management (ADEM), the Groundwater Protections Standards (GWPS) were updated during this 2023 2nd semi-annual statistical analysis. The GWPS will be updated again during the 2025 2nd semi-annual statistical analysis. The methodology used to create these GWPS is described below.

Confidence Intervals

Confidence intervals were then constructed on downgradient wells using a maximum of the most recent 8 samples through September 2023 for each of the Appendix IV parameters. Confidence intervals were included for newer wells with a minimum of 4 samples (Figure I). These intervals were either parametric or nonparametric confidence intervals depending on the data distribution and percentage of non-detects. When data followed a normal or transformed-normal distribution, parametric confidence intervals were used for Appendix IV parameters. Nonparametric confidence intervals, which use the highest and lowest values as interval limits when n=8, were constructed when data did not follow a normal or transformed-normal distribution or when there were greater than 50% non-detects. The lower confidence limit, which is constructed with 99% confidence for parametric confidence intervals, is compared to the GWPS prepared as described above. The confidence level associated with nonparametric confidence intervals is dependent upon the number samples available.

Note that due to smaller sample sizes (n<8), the lower confidence limit resulted in a negative number for several constituents among newer downgradient wells when constructed with parametric confidence intervals. Therefore, a non-parametric confidence interval, which is bound by reported high and low measurements within a given well, was constructed for this particular case and follows the confidence intervals constructed for all other downgradient wells (Figure I). This is a more conservative approach in that the lower confidence limit reflects the lowest reported measurement in the data set rather than a negative number.

As mentioned above, well/constituent pairs containing 100% non-detects for the most recent 8 samples did not require statistics; therefore, they were deselected prior to construction of confidence intervals. A list of those deselected well/constituent pairs follows this report. Each confidence interval was compared with the corresponding GWPS. Only when the entire confidence interval is above the GWPS is the well/constituent pair considered to exceed its respective standard. Both a tabular summary and graphical presentation of the confidence interval results follow this letter. Exceedances were noted for the following well/constituent pairs:

- Arsenic: GS-AP-MW-6D, GS-AP-MW-7, GS-AP-MW-13R, and GS-AP-MW-46
- Lithium: GS-AP-MW-6D, GS-AP-MW-7 and GS-AP-MW-15
- Molybdenum: GS-AP-MW-7

Trend Test Evaluation – Appendix IV

When confidence interval exceedances are identified in downgradient wells, data are further evaluated using the Sen's Slope/Mann Kendall trend test to determine whether concentrations are statistically increasing, decreasing, or stable at the 95% confidence level (Figure J). Utilizing the 95% confidence level for trend tests readily identifies significant trends and is more sensitive than the 99% confidence level without drastically increasing the false negative rate. Upgradient wells are included in the trend analyses for all parameters found to exceed their prediction limit in downgradient wells. When similar patterns exist upgradient of the site, it is an indication of variability in groundwater which may be unrelated to practices at the site. As mentioned above, upgradient well GS-AP-MW-18R was not included with any trend test evaluations Statistically significant trends were identified for the following well/constituent pairs:

Increasing:

- Arsenic: GS-AP-MW-6D and GS-AP-MW-7
- Lithium: GS-AP-MW-6D, GS-AP-MW-7, and GS-AP-MW-15 and GN-AP-MW-20
- Molybdenum: GS-AP-MW-7

Decreasing:

- Lithium: GS-AP-MW-8 and GS-AP-MW-17V (both upgradient)

Note that the statistically significant decreasing trend for lithium in upgradient well GS-AP-MW-8 indicates a zero slope which represents only the median slope of all possible pairwise slopes within this record. A summary of the trend test results follows this letter.

Notes:

1. mg/L - Milligrams per liter
2. pCi/L - Picocuries per liter
3. The background limits were used as the groundwater protection standard (GWPS) when appropriate under 40 CFR §257.95(h), ADEM Rule 335-13-15-.06(h), and the ADEM Variance.
4. GWPS established during second semi-annual sampling event in 2023.

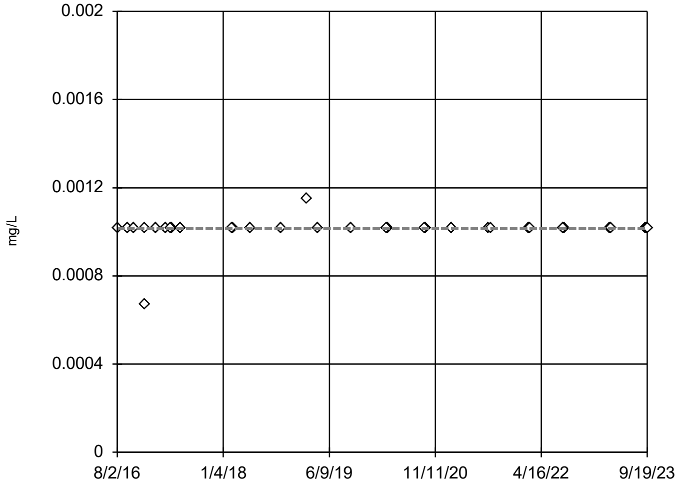
Tukey's Outlier Screening, Pooled Background

GS-AP-MW-13,GS-AP-MW-17V,GS-AP-MW-8...



n = 47

No outliers found. Tukey's method selected by user.

Data were x^5 transformed to achieve best W statistic (graph shown in original units).

The results were invalidated, because the lower and upper quartiles are equal.

Sanitas™ v.10.0.13 . UG
Hollow symbols indicate censored values.

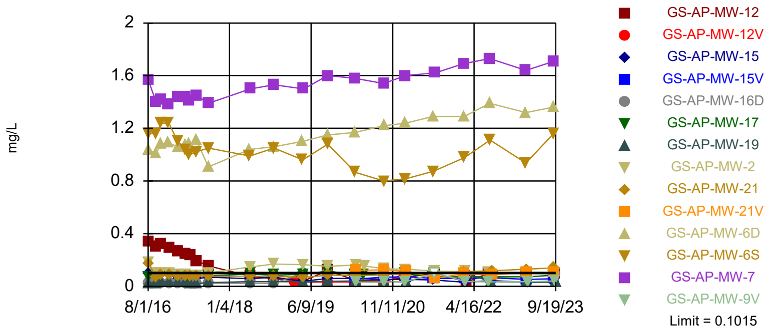
Exceeds Limit: GS-AP-MW-21, GS-AP-MW-21V, GS-AP-MW-6D, GS-AP-MW-6S, GS-AP-MW-7

Prediction Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 47 background values. 76.6% NDs. Annual per-constituent alpha = 0.02301. Individual comparison alpha = 0.000831 (1 of 2). Comparing 14 points to limit.

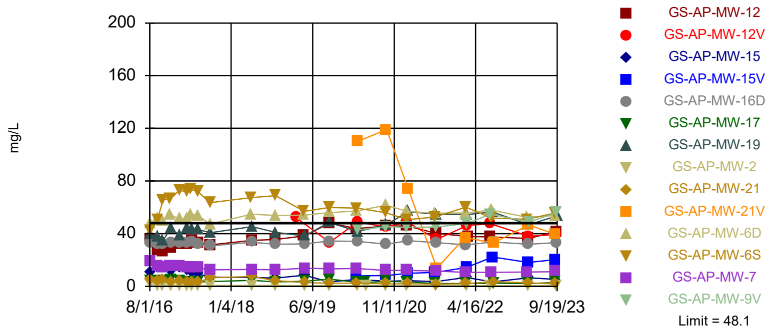
Prediction Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because the Shapiro Wilk normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 47 background values. Annual per-constituent alpha = 0.02301. Individual comparison alpha = 0.000831 (1 of 2). Comparing 14 points to limit.

Notes:

1. mg/L - Milligrams per liter

2. pCi/L - Picocuries per liter

3. The background limits were used as the groundwater protection standard (GWPS) when appropriate under 40 CFR §257.95(h), ADEM Rule 335-13-15-.06(h), and the ADEM Variance.

4. GWPS established during second semi-annual sampling event in 2023.

Executive Summary

As described in the *Groundwater Remedy Selection Report* (Anchor QEA 2021a), geochemical manipulation via injections was not selected as one corrective measure for arsenic, lithium, and molybdenum in groundwater at the William Crawford Gorgas Electric Generating Plant (Plant Gorgas) Ash Pond (Site) located in Walker County, Alabama. Geochemical manipulation was not selected because it had not been proven in field applications for effective treatment of inorganic constituents in fractured rock settings at the time of remedy selection. However, to enable the evaluation of geochemical manipulation should injection treatment become necessary at the Site, treatability studies were performed to determine the optimum reagents and their doses and to provide information for the required underground injection control permit and design of the injection treatment at the Site.

Treatability studies for injection treatment (geochemical manipulation) at the Site consisted of the following steps:

- Sampling and characterization of groundwater
- Batch tests, both screening and optimization
- Selective sequential extraction (SSE) on post-treatment solids

Groundwater samples were collected from two areas, based on number and concentrations of constituents of interest (COIs), to help select areas for field pilot testing. Groundwater samples were analyzed for major cations, anions, COIs and other Appendix III/IV parameters, and water quality parameters influencing the chemical behavior of the COIs. Prior to beginning treatability testing, confirmatory analysis of the COIs and dissolved aluminum, iron, and manganese concentrations was performed.

Based on previous successful treatability studies at other sites and geochemical studies performed as part of remedy selection (Anchor QEA 2021a), a series of batch tests was performed to determine the effectiveness and to rank the performance of the selected reagents in reducing the COI concentrations in Site groundwater. Reagents were added to test bottles filled with Site groundwater. The groundwater collected at GS-AP-MW-6D contained arsenic and lithium as COIs. The groundwater collected at GS-AP-MW-7 contained arsenic, lithium, and molybdenum as COIs.

In the screening batch tests, 17 reagents (or reagent mixes) and aeration were initially tested. More than one reagent (or reagent mix) effectively removed arsenic, lithium, and molybdenum from Site groundwater. Ferrous sulfate ($FeSO_4$) and ferric chloride ($FeCl_3$) were two of the most promising reagents for removing arsenic and molybdenum in the screening batch tests. Low dissolved iron concentrations in groundwater resulted in poor performance of both aeration and potassium permanganate ($KMnO_4$) in removing arsenic and molybdenum from Site groundwater. Two treatments, granular hydrotalcite (HT-4U, a layered double hydroxide [LDH]) and the reagent mix

$FeCl_3$ + manganese chloride ($MnCl_2$) + magnesium chloride ($MgCl_2$), followed by sodium aluminate ($NaAlO_2$) + $KMnO_4$ (Fe-Mn-Mg-Al-Cl LDH), were successful at decreasing all three COIs, arsenic, molybdenum, and lithium concentrations to less than the groundwater protection standard (GWPS) in the screening batch tests. The reagent mix is designed to produce LDH precipitates in situ.

Optimization batch tests were conducted to refine the best reagent mixes and dosing to achieve the most effective simultaneous arsenic, lithium, and molybdenum removal. Five reagents (or reagent mixes) aimed at producing different LDH phases were tested, and sodium hydroxide was replaced with sodium carbonate (Na_2CO_3) for pH adjustment, as Na_2CO_3 is safer to handle in the field. In round one, the best removal of arsenic, lithium, and molybdenum was achieved using $FeSO_4$, followed by $NaAlO_2$ with Na_2CO_3 to buffer pH (Fe-Al-SO_4-CO_3). The other reagent mixes tested effectively removed arsenic and lithium, but not molybdenum (due to pH). A second round of optimization batch tests was performed to target a circumneutral final pH to improve molybdenum removal and maintain arsenic and lithium removal. The four reagent mixes tested achieved the GWPS for all three COIs. The four successful reagent mixes include $MnCl_2$, followed by $NaAlO_2$ + $KMnO_4$ with Na_2CO_3 (Mn-Al-Cl-CO_3 LDH2); $MnCl_2$, followed by $NaAlO_2$ + $KMnO_4$ (Mn-Al-Cl LDH); $FeSO_4$ + $MnCl_2$, followed by $NaAlO_2$ + $KMnO_4$ with Na_2CO_3 (Fe-Mn-Al-Cl-SO_4-CO_3 LDH); and $FeSO_4$ + $MnCl_2$, followed by $NaAlO_2$ + $KMnO_4$ (Fe-Mn-Al-Cl-SO_4 LDH).

Following completion of the batch tests, the post-treatment solids formed during the optimization batch test round 2 were tested to help evaluate the long-term stability of sequestered COIs using a five-step SSE procedure. In SSE, the post-treatment solids are extracted by a series of increasingly chemically aggressive solutions that target different binding forms, and the COIs released by each extraction step are quantified. The results are used to determine the mechanisms and strength of binding and inform long-term stability (or reversibility) of the treatment.

SSE results indicate arsenic, lithium, and molybdenum are bound almost exclusively (near 100%) in stable solid phases (F2 through F5)—specifically, through chemical bonding to, or incorporation into, metal oxides and hydroxides, such as iron and manganese oxides, and residual phases (dissolved only by concentrated strong acids). The associations with metal oxides and hydroxides were expected and indicate successful treatment, as iron, manganese, and aluminum were major components of the treatment solutions.

Overall, the Fe-Mn-Al-Cl-SO_4-CO_3 LDH reagent mix effectively treated arsenic, lithium, and molybdenum in Site groundwater and is the recommended two-solution treatment for pilot-scale testing (should geochemical manipulation pilot-scale testing be implemented). As part of the pre-design investigation, concentrations and proportions of treatment constituents may need to be adjusted to achieve acceptable residual levels of dissolved manganese in treated groundwater.

1 Introduction

As discussed in the *Groundwater Remedy Selection Report* (Anchor QEA 2021a), geochemical manipulation via injections was not selected as one corrective measure for constituents of interest (COIs) at the William Crawford Gorgas Electric Generating Plant (Plant Gorgas) Ash Pond (Site) located in Walker County, Alabama. COIs at the Site are arsenic, lithium, and molybdenum. However, to enable the evaluation of geochemical manipulation should injection treatment become necessary at the Site, laboratory treatability studies needed to be performed using the Site-impacted groundwater.

Geochemical manipulation removes COIs from groundwater and immobilizes them in situ through the creation of solid precipitates (e.g., layered double hydroxide [LDH] precipitates) formed from injection of treatment solutions (reagents). COIs adsorb to the solid surfaces of precipitates and are incorporated into the solid structures.

The site-specific treatability studies discussed herein were conducted to evaluate reagent selection, dosing, and injection sequencing for in situ groundwater remediation. The treatability study approach includes the following:

- Sampling and characterization (analysis) of groundwater
- Batch testing (screening batch tests, followed by optimization batch tests) to identify, rank, and refine reagents and reagent mixes for removal of COIs from Site groundwater
- Determining the stability of each treatment by selective sequential extraction (SSE) of post-treatment solids to provide information on the mechanisms and stability of COI sequestration

2 Selection of Reagents

Selection and formulation of reagents that can be injected to treat site-specific COIs were based on site-specific groundwater geochemistry, previous Site work, and prior experience from successful treatability studies performed by Anchor QEA, for the same COIs at other sites for confidential clients. The *Monitored Natural Attenuation Demonstration* (Anchor QEA 2021b) documented key geochemical attenuation mechanisms occurring at the Site, including the following:

- Sorption on and/or coprecipitation with iron, manganese, and aluminum oxides and hydroxides for arsenic, lithium, and molybdenum
- Cation exchange on oxides and clay minerals for lithium
- Potential precipitation of barium arsenate phases for arsenic (predicted by geochemical modeling)

Iron, manganese, and aluminum oxides are strong sorbents for many metals and metalloids, including arsenic (Dixit and Hering 2003; Manning et al. 2003; Mohan and Pittman 2007; Ouvard et al. 2002) and molybdenum (Das et al. 2023; Xu et al. 2013). Subsurface geochemical conditions at the Site are generally favorable for formation of iron oxides. Lithium has an affinity for manganese and other metal oxides (Ooi et al. 1988; Yu et al. 2022). Therefore, the treatability studies were initially focused on reagents (or mixtures of reagents) with the potential to increase the abundance and stability of iron, manganese, and/or aluminum oxides and hydroxides in the subsurface. Based on Site conditions and treatability studies previously completed for other sites, the following reagents and reagent mixes were initially selected for screening tests:

- Aeration
- Ferrous sulfate ($FeSO_4$; FS)
- Ferric chloride ($FeCl_3$; FC)
- FC with pH adjusted to 5 (sodium hydroxide [NaOH])
- CleanER-10 (injectable zero-valent iron); CleanER
- FerroBlack-Fe+ (FerroBlack; injectable iron sulfide)
- Potassium permanganate ($KMnO_4$; PM)
- $FeSO_4$ + manganese chloride ($MnCl_2$), followed by $KMnO_4$; Fe-Mn-Cl-SO_4 LDH
- Fe-Mn-Cl-SO_4 LDH with pH adjusted to 9.5 (NaOH)
- $FeCl_3$ + $MnCl_2$, followed by $KmnO_4$; Fe-Mn-Cl LDH
- Fe-Mn-Cl LDH with pH adjusted to 9.5 (NaOH)
- Barium chloride ($BaCl_2$)
- Magnesium chloride ($MgCl_2$), followed by sodium aluminate ($NaAlO_2$) with pH adjusted to 9.5 (NaOH); Mg-Al-Cl LDH
- Granular hydrotalcite (HT-4U) (Kisuma Chemicals B.V.; injectable magnesium-aluminum LDH)

- $FeCl_3$ + $MnCl_2$ + $MgCl_2$, followed by $NaAlO_2$ + $KMnO_4$ with pH adjusted to 9.5 (NaOH); Fe-Mn-Mg-Al-Cl LDH (pH 9.5)
- Helena Quarry dolomite (DH)
- Lakeshore Quarry dolomite (DL)
- Dolomitic quicklime (carmeuse) (DQ)

Soluble iron reagents such as $FeSO_4$ and $FeCl_3$ are acidic and form iron oxides/hydroxides such as ferrihydrite ($Fe(OH)_3$) when neutralized. Iron oxides/hydroxides can adsorb and/or coprecipitate arsenic and molybdenum. Zero-valent iron, specifically CleanER, was tested because it oxidizes to form iron oxides/hydroxides over time that can remove arsenic (Biterna et al. 2007), molybdenum (Zhu et al. 2020), and other heavy metals (Moraci and Calabrò 2010).

FerroBlack is a proprietary amendment from Redox Solutions. The active ingredient in FerroBlack is a reactive iron sulfide, which immobilizes arsenic through adsorption at low arsenic concentrations and precipitation/mineralization of arsenic sulfides at higher arsenic concentrations (Niazi and Burton 2016).

Permanganate has been widely used for in situ chemical oxidation. Permanganate reacts with mineral components in the aquifer matrix to produce manganese oxides, which can adsorb and incorporate COIs (Hou et al. 2017; Al Abdullah et al. 2016; Le and Phuc 2015).

Barium chloride was included in the screening tests because preliminary geochemical modeling indicated conditions were favorable for barium arsenate precipitation from groundwater. Increasing the dissolved barium concentration would, therefore, be expected to reduce arsenic concentrations.

Hydrotalcite is a magnesium/aluminum LDH mineral phase that can sequester a wide range of cations and anions from water (Douglas 2014). Previous treatability studies performed by Anchor QEA documented that commercially available hydrotalcite effectively removed lithium. Hydrotalcite can also be precipitated from solution by mixing $MgCl_2$ and $NaAlO_2$. Both commercially available granular hydrotalcite and the injectable reagents (e.g., $MgCl_2$, followed by $NaAlO_2$) were tested to assess effectiveness in reducing lithium concentrations in Site groundwater.

Dolomite from two different quarries in Central Alabama (Helena Quarry and Lakeshore Quarry) and dolomitic quicklime (Carmeuse) were added to the reagent list (based on previously completed treatability studies for another site) and tested to assess their potential for lithium removal.

The full list of treatments tested and reagent vendor sources is included in Table 1. Note that LDHs include a group of phases that can be formed from a range of metal cations (including magnesium, iron, manganese, and aluminum) and anions besides hydroxide (including carbonate, chloride, and sulfate). The different potential forms are designated by the cations and anions in the reagents used to precipitate them (e.g., Mg-Al-Cl LDH refers to the phase[s] formed by reacting $MgCl_2$ with $NaAlO_2$).

The effectiveness of these treatments on COI removal was screened and evaluated through a series of batch tests. Bulk chemical composition data (including Appendix III/ IV parameters) of technical-grade reagents were not collected before treatability testing but will be tested prior to field pilot studies.

3 Sampling and Initial Characterization

Groundwater samples were collected from the Site for treatability testing conducted at the Anchor QEA Environmental Geochemistry Laboratory (EGL) in Portland, Oregon.

3.1 Sample Collection

Groundwater samples were collected by Alabama Power Company with support from Anchor QEA from wells GS-AP-MW-6D and GS-AP-MW-7 (Figure 1). Five gallons of groundwater were collected from each well on July 25, 2022, for batch tests.

Prior to sampling, monitoring wells were purged until water quality parameters (pH, temperature, specific conductivity [SC], oxidation reduction potential [ORP], and dissolved oxygen [DO]) stabilized. Then, groundwater samples were collected in low-density polyethylene Cubitainers. Cubitainers were filled with zero headspace and packed in Mylar barrier bags containing oxygen-absorbent packets to minimize potential changes in redox conditions during transport to the EGL. Anaerobic conditions were maintained during sample handling at the EGL.

3.2 Sample Analysis and Results

Groundwater samples collected in the field were also sent directly to the Alabama Power Company Environmental Laboratory (APCEL) in Calera, Alabama, and Pace Analytical Services, LLC, and analyzed for major cations, anions, COIs, other Appendix III/IV parameters, and water quality parameters influencing the chemical behavior of the COIs (Table 2). Prior to commencing treatability testing at the EGL, groundwater samples in the received Cubitainers were subsampled and submitted to ALS Environmental in Kelso, Washington, for confirmatory analysis of COIs and dissolved iron and manganese concentrations (Table 2). Laboratory analytical reports are included in Appendix A. Water quality parameters including pH, ORP, and DO were measured at the EGL (Table 2). Although almost all parameters were similar to the initial characterization results from groundwater samples sent directly from the field to APCEL, the dissolved arsenic concentration in GS-AP-MW-6D decreased after the groundwater samples were shipped to EGL. Thus, groundwater samples from GS-AP-MW-6D used for batch testing were spiked with arsenic to ensure arsenic partitioning between groundwater and solids could be measured.

4 Batch Tests

4.1 Methodology

A series of batch tests was performed to determine and rank the performance of the selected reagents in reducing the COI concentrations in Site groundwater. Reagents (or reagent mixes) were added to test bottles filled with Site groundwater. Control samples containing untreated groundwater were included to compare efficacy of the reagents. The performance of the reagents (or reagent mixes) was evaluated in terms of the COI removal efficiency and the final COI concentrations relative to their groundwater protection standard (GWPS).

The batch tests were divided into the following two stages: 1) screening batch tests to assess and compare the effectiveness of all the reagents (or reagent mixes) to remove the COIs; and 2) optimization batch tests to improve performance of reagent mixes retained from the screening batch tests by modifying reagent dose, combining reagents, and/or adjusting pH.

Except for aeration, the batch tests were performed under a nitrogen atmosphere in an anaerobic chamber to prevent changes in redox due to exposure to air. The general procedure for the batch tests is described in the following steps:

1. Test bottles were prepared in a controlled-atmosphere glove box with 200 milliliters (mL) of groundwater. The initial arsenic concentration in Site groundwater collected from GS-AP-MW-6D as received at the EGL was generally lower than expected based on historical data. The Site groundwater sample from GS-AP-MW-6D was spiked with arsenic to provide initial arsenic concentration to enable evaluation of treatment performance for arsenic. An arsenic stock solution was prepared from sodium arsenate heptahydrate ($Na_2HAsO_4 \cdot 7H_2O$) and used to spike the Site groundwater from GS-AP-MW-6D used for the batch tests. The target spiked dissolved arsenic concentration was 200 micrograms per liter (µg/L), which is slightly higher than the average historical concentration of 120 µg/L. Spiking of lithium and molybdenum was not necessary because the initial lithium and molybdenum concentrations were consistent with historical data.
2. Reagents or reagent mixes were added to the test bottles at a predetermined dose based on groundwater chemistry and previous successful treatability studies at other sites. The treatments tested for the screening and optimization batch tests are presented in Tables 3 and 6, respectively. Controls without any reagent were also prepared for each groundwater. The test bottles were sealed in Mylar bags with oxygen-absorbent packets and placed on a shaker table for 7 days. The aeration test bottles were placed on the countertop with caps open for 7 days.
3. Supernatants were collected from the test bottles at the end of the reaction period, filtered using 0.45-micron polyethersulfone syringe filters, and preserved with nitric acid. The filtered water samples were submitted to ALS Environmental and analyzed for dissolved COIs and

treatment constituents by U.S. Environmental Protection Agency (USEPA) Method 200.8 (inductively coupled plasma mass spectrometry). Water quality parameters including pH, ORP, and SC were also measured at the time of collection.

4. The solid fractions formed during the optimization batch tests were recovered, subsamples were used for the SSE analysis, and the remaining samples were archived for possible future characterization.

4.2 Screening Batch Test Results

Tables 4 and 5 and Figures 2 and 3 show the results of the screening batch tests, specifically the following:

- Arsenic: the following nine treatments decreased arsenic concentrations to less than the GWPS (10 µg/L) in both groundwaters: 1) FS; 2) FC (pH 5); 3) HT-4U; 4) DQ; 5) Fe-Mn-Cl LDH; 6) Fe-Mn-Cl LDH (pH 9.5); 7) Fe-Mn-Cl-SO_4 LDH; 8) Fe-Mn-Cl-SO_4 LDH (pH 9.5); and 9) Fe-Mn-Mg-Al-Cl LDH (pH 9.5). CleanER, FerroBlack, DH, DL, PM, and aeration had variable results, but arsenic concentrations were not reduced below the GWPS in either GS-AP-MW-6D or GS-AP-MW-7 groundwater. FC achieved the GWPS in GS-AP-MW-7 but not GS-AP-MW-6D, and $BaCl_2$ and Mg-Al-Cl LDH (pH 9.5) achieved the GWPS in GS-AP-MW-6D but not GS-AP-MW-7.
- Lithium: two of the treatments tested, HT-4U and Fe-Mn-Mg-Al-Cl LDH (pH 9.5), were effective in reducing lithium concentrations in GS-AP-MW-6D and GS-AP-MW-7 groundwater to less than the GWPS (80.9 µg/L).
- Molybdenum: molybdenum is a COI in GS-AP-MW-7. The following 13 treatments decreased molybdenum concentrations to less than the GWPS (100 µg/L): 1) FS; 2) FC; 3) FC (pH 5); 4) $BaCl_2$; 5) HT-4U; 6) Mg-Al-Cl LDH (pH 9.5); 7) DQ; 8) PM; 9) Fe-Mn-Cl LDH; 10) Fe-Mn-Cl LDH (pH 9.5); 11) Fe-Mn-Cl-SO_4 LDH; 12) Fe-Mn-Cl-SO_4 LDH (pH 9.5); and 13) Fe-Mn-Mg-Al-Cl LDH (pH 9.5).

Laboratory analytical reports are included in Appendix A.

4.3 Optimization Batch Test Results

In the screening batch tests, iron-containing reagents (except CleanER and FerroBlack) effectively removed arsenic and molybdenum from Site groundwater (GS-AP-MW-6D and GS-AP-MW-7). Since only HT-4U and Fe-Mn-Mg-Al-Cl LDH (pH 9.5) treatments achieved sufficient lithium removal at the tested doses (Tables 4 and 5), improving lithium removal (while maintaining effective arsenic and molybdenum removal) became the primary focus of the optimization batch tests. This included increasing doses of selected reagents, adjusting solution pH with sodium carbonate (Na_2CO_3) instead of NaOH, and testing new reagent mixes with potential to remove lithium. Based on the screening batch test results and previous treatability studies performed by Anchor QEA for other coal combustion residuals sites, the following reagent mixes were selected and tested in the first round of optimization batch tests:

- $MgCl_2$, followed by $NaAlO_2$ with Na_2CO_3 (Mg-Al-Cl-CO_3 LDH)
- $MnCl_2$, followed by $NaAlO_2$ with Na_2CO_3 (Mn-Al-Cl-CO_3 LDH1)
- $FeSO_4$, followed by $NaAlO_2$ with Na2CO3 (Fe-Al-SO_4-CO_3)
- $MnCl_2$, followed by $NaAlO_2$ + $KMnO_4$ with Na_2CO_3 (Mn-Al-Cl-CO_3 LDH2)
- $FeSO_4$ + $MnCl_2$, followed by $NaAlO_2$ + $KMnO_4$ with Na_2CO_3 (Fe-Mn-Al-Cl-SO_4-CO_3 LDH)

The treatments for round 1 are summarized in Table 6.

Results from the first round of optimization batch tests are summarized in Figures 4 and 5, the data are provided in Table 7, and the laboratory analytical reports are included in Appendix A. All five treatments decreased lithium concentrations to less than the GWPS for both Site groundwaters. The Mg-Al-Cl-CO_3 LDH treatment decreased arsenic concentrations to less than the GWPS for groundwater GS-AP-MW-6D but not GS-AP-MW-7. The other four treatments decreased arsenic concentrations to less than the GWPS for both groundwaters. Only the Fe-Al-SO_4-CO_3 treatment decreased the molybdenum concentration to less than the GWPS.

Based on the first round of optimization batch test results, a second round of optimization batch testing was performed to improve molybdenum removal, while maintaining effective lithium and arsenic removal. The following list of reagent mixes were selected and tested in the second round of optimization batch tests:

- $MnCl_2$, followed by $NaAlO_2$ + $KMnO_4$ with Na_2CO_3 (Mn-Al-Cl-CO_3 LDH2)
- $MnCl_2$, followed by $NaAlO_2$ + $KMnO_4$ (Mn-Al-Cl LDH)
- $FeSO_4$ + $MnCl_2$, followed by $NaAlO_2$ + $KMnO_4$ with Na_2CO_3 (Fe-Mn-Al-Cl-SO_4-CO_3 LDH)
- $FeSO_4$ + $MnCl_2$, followed by $NaAlO_2$ + $KMnO_4$ (Fe-Mn-Al-Cl-SO_4 LDH)

The doses of the reagents were adjusted to achieve a circumneutral final pH to increase molybdenum removal. The treatments for round 2 are summarized in Table 6.

Results from the second round of optimization batch tests are summarized in Figures 6 and 7, the data are provided in Table 7, and the laboratory analytical reports are included in Appendix A. Table 8 summarizes the performance of all treatments tested in the optimization batch tests to remove COIs from Site groundwater (GS-AP-MW-6D and GS-AP-MW-7). All four treatments from round 2 decreased the concentrations of all three COIs to less than the GWPS in both groundwaters tested.

Additional criteria used to rank the treatments included potential for secondary water quality effects such as residual dissolved concentrations of treatment reagents (e.g., manganese and iron). Residual manganese concentrations, in particular, were elevated, as manganese solubility generally increases below a pH of 7 to 8. The two treatment mixes that included $FeSO_4$ resulted in lower residual dissolved manganese concentrations (Table 7) and low residual iron concentrations. These reagent mixes likely produced ferric iron-containing oxide/hydroxide phases, which are relatively insoluble over a wide pH range under oxidizing conditions (Hem 1963) and can adsorb and incorporate manganese.

5 Treatment Mechanisms and Stability

SSE determines the distribution of specific chemical constituents, including COIs, among different binding forms in the solid-phase precipitates formed as a result of treatment. SSE results provide insights into the nature of the precipitates, COI removal mechanisms and potential for remobilization, and long-term stability of the sequestered COIs. Specifically, SSE quantifies the concentrations of target constituents in five operationally defined fractions, F1 through F5, which are extracted from the solid sample by increasingly chemically aggressive solutions. The fractions, extraction solutions used, and binding forms and phases targeted by each are summarized as follows:

Fraction No.	Fraction Name	Extraction Solution	Targeted Phases/Species
F1	Soluble	1 M magnesium chloride adjusted to pH 7	Dissolved and weakly sorbed species
F2	Exchangeable	1 M monosodium phosphate at pH 5	Strongly sorbed, e.g., on oxides
F3	Reducible	0.1 M hydroxylamine/hydrochloric acid adjusted to pH 2 with nitric acid	Poorly crystalline metal oxides such as iron and manganese oxides
F4	Strong acid/oxidizable	16 M nitric acid	Crystalline oxides
F5	Residual	Digestion by USEPA Method 3050B	Recalcitrant phases in the post-treatment solids

SSE was performed on precipitates recovered from round 2 of the optimization batch tests in accordance with the EGL standard operating procedure modified after Tessier et al. (1979). Approximately 1 gram (dry weight) of the recovered post-treatment solids was weighed into a 50-mL centrifuge tube and extracted with the solutions in the sequence described above.

The SSE results are summarized in Figures 8 through 13 and Table 9; the analytical data are included in Appendix A.

The main components of the precipitates (iron, manganese, and aluminum) were consistently extracted in F4, indicating high stability of the solid phases formed (Figures 8 through 10). A portion of the manganese was also extracted in F3 (reducible fraction), consistent with the formation of oxides and LDHs containing manganese in an oxidized state (Figure 10).

SSE results indicate arsenic, lithium, and molybdenum are sequestered in relatively stable forms in the precipitates (Figures 11 through 13). Arsenic is predominantly distributed among F2, F3, and F4, indicating adsorption on and incorporation into iron, manganese, and/or aluminum oxide and hydroxide phases (Figure 11). Lithium is predominantly distributed in F3, with variable but lesser amounts in F4 and F2 (Figure 12). Molybdenum was predominantly distributed in F4 and, to a lesser extent, in F3 and <5% in F2 (Figure 13).

The precipitates recovered from treatments that included Na_2CO_3 for pH buffering generally had slightly to moderately higher COI concentrations than those from the treatments without Na_2CO_3 (Figures 11 through 13). This observation suggests pH buffering with Na_2CO_3 provides optimal simultaneous removal of arsenic, lithium, and molybdenum from the groundwaters tested and may also enhance COI uptake capacity by the precipitates.

6 Conclusions and Recommendations

Batch tests were performed to evaluate the effectiveness of select reagents and reagent mixes in removing the COIs (i.e., arsenic, lithium, and molybdenum) from Site groundwater. Performance criteria evaluated included the COI removal efficiency, treatment capacity, stability of the sequestered COIs, and potential for unintended consequences such as elevated residual concentrations of reagent constituents in groundwater. Major conclusions of the treatability studies are as follows:

- Four reagent mixes designed to form LDH precipitates achieved the GWPS for arsenic, lithium, and molybdenum in batch tests for both groundwaters tested (GS-AP-MW-6D and GS-AP-MW-7):
    - Mn-Al-Cl LDH
    - Mn-Al-Cl-CO_3 LDH2
    - Fe-Mn-Al-Cl-SO_4 LDH
    - Fe-Mn-Al-Cl-SO_4-CO_3 LDH
- The precipitates consist of highly stable aluminum, manganese, and iron oxide, hydroxide, and/or LDH solid phases.
- Arsenic, lithium, and molybdenum are strongly bound to and incorporated in these solid phases.
- Use of Na_2CO_3 for pH buffering measurably increased COI uptake capacity.
- Residual dissolved manganese concentrations in the batch test bottles following treatment were elevated. Treatments that included $FeSO_4$ had lower residual manganese concentrations.

Should geochemical manipulation pilot testing be implemented, recommendations and considerations based on the laboratory treatability studies are as follows:

- The Fe-Mn-Al-Cl-SO_4-CO_3 LDH reagent mix is recommended for field pilot testing. The four effective treatments identified in the previous list represent variations of a two-solution injection approach to simultaneously remove arsenic, lithium, and molybdenum from Site groundwater by precipitation of LDH-type phase(s) with pH buffering optimized for the specific COIs present.
- The proportions and concentrations of the reagents can be further tailored, if necessary, to account for groundwater conditions at field pilot test locations (e.g., if pilot testing is to be performed at a different location than the wells used for treatability testing).
- Residual dissolved manganese concentrations may be elevated for some time following injection. Although it is expected that manganese will be attenuated downgradient of the injection location, residual concentrations can also be controlled by reducing the concentrations in the injection solutions or recovery of residual injectate by groundwater

extraction, either at a downgradient well location or at the injection well (i.e., push-pull treatment).

- Following selection of pilot locations and prior to implementation of field pilot tests, groundwater chemistry data should be reviewed, especially if a pilot test location is at a different location than the wells tested in this laboratory treatability study. If there are substantial differences in groundwater chemistry, confirmatory batch testing is recommended to confirm treatment performance and, if necessary, adjust the proposed injection reagent mix.
- Yield and distribution of precipitates produced by the two-solution injection in the field may vary based on groundwater chemistry and method of injection. The need for further optimization of proportions and concentrations of treatment constituents should be evaluated as part of pre-design activities.

Notes:

Samples were field filtered with a 0.45-micron filter at the time of collection and filtered again prior to analysis for dissolved constituents.

Samples were collected in the field on July 25, 2022, then sent directly to the analytical laboratories (APC Environmental Laboratory and Pace Analytical Services, LLC) and to EGL for supplemental testing. EGL submitted subsamples to ALS Environmental for additional initial characterization on August 2, 2022 (Sample Delivery Group No. K2208820).

Some analytes from the samples submitted on July 25, 2022 had two analytical results associated with a single sample. When this occurred, results were averaged for this table.

Notes:
Mn-Al-Cl-CO3 LDH2 (MW-7) was tested in duplicate. The average of the two results is shown here.
Aluminum was only analyzed in F3, F4, and F5.
F1: water soluble, dissolved, and weakly sorbed (extracted by 1 M magnesium chloride to pH 7)
F2: exchangeable, strongly sorbed, e.g., on oxides (extracted by 1 M monosodium phosphate at pH 5)
F3: reducible, e.g., poorly crystalline metal oxides such as aluminum, iron, and manganese oxides (extracted by 0.1 M hydroxylamine/hydrogen chloride adjusted to pH 2 with nitric acid)
F4: oxidizable, e.g., crystalline oxides (extracted by 16 M nitric acid)
F5: residual, e.g., recalcitrant phases in the post-treatment solids (prepared by U.S. Environmental Protection Agency Method 3050B)

Laboratory Results for: Gorgas

Dear Masa,

Enclosed are the results of the sample(s) submitted to our laboratory August 03, 2022
For your reference, these analyses have been assigned our service request number **K2208820.**

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at Mark.Harris@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

Sample Receipt:

Two water samples were received for analysis at ALS Environmental on 08/03/2022. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Metals:

No significant anomalies were noted with this analysis.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Laboratory Results for: 2022-Gorgas

Dear Masa,

Enclosed are the results of the sample(s) submitted to our laboratory December 01, 2022
For your reference, these analyses have been assigned our service request number **K2214178.**

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at Mark.Harris@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

Sample Receipt:

Two water samples were received for analysis at ALS Environmental on 12/01/2022. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Metals:

No significant anomalies were noted with this analysis.

Approved by ______________________ Date 12/07/2022

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at www.ALSGlobal.com or at the accreditation bodies web site.
Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/anlayte is offered by that state.

Laboratory Results for: 2022-Gorgas

Dear Masa,

Enclosed are the results of the sample(s) submitted to our laboratory December 01, 2022
For your reference, these analyses have been assigned our service request number **K2214181.**

Analyses were performed according to our laboratory’s NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at Mark.Harris@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

Sample Receipt:

Fifteen water samples were received for analysis at ALS Environmental on 12/01/2022. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Metals:

No significant anomalies were noted with this analysis.

4. Was a Temperature Blank present in cooler? NA [✓ Y] N If yes, notate the temperature in the appropriate column above:
   If no, take the temperature of a representative sample bottle contained within the cooler; notate in the column "Sample Temp":
5. Were samples received within the method specified temperature ranges? NA [✓ Y] N
   If no, were they received on ice and same day as collected? If not, notate the cooler # below and notify the PM. [✓ NA] Y N

If applicable, tissue samples were received: Frozen Partially Thawed Thawed

6. Packing material: Inserts [✓ Baggies] Bubble Wrap Gel Packs [✓ Wet Ice] Dry Ice Sleeves ________
7. Were custody papers properly filled out (ink, signed, etc.)? NA [✓ Y] N
8. Were samples received in good condition (unbroken) NA [✓ Y] N
9. Were all sample labels complete (ie, analysis, preservation, etc.)? NA [✓ Y] N
10. Did all sample labels and tags agree with custody papers? NA [✓ Y] N
11. Were appropriate bottles/containers and volumes received for the tests indicated? NA [✓ Y] N
12. Were the pH-preserved bottles (*see SMO GEN SOP*) received at the appropriate pH? *Indicate in the table below* NA [✓ Y] N
13. Were VOA vials received without headspace? *Indicate in the table below.* [✓ NA] Y N
14. Was C12/Res negative? [✓ NA] Y N
15. Were 100ml sterile microbiology bottles filled exactly to the 100ml mark? [✓ NA] Y N Under filled Overfilled

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory’s NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at www.ALSGlobal.com or at the accreditation bodies web site.

Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/anlayte is offered by that state.

Laboratory Results for: 2022-Gorgas

Dear Masa,

Enclosed are the results of the sample(s) submitted to our laboratory December 01, 2022
For your reference, these analyses have been assigned our service request number **K2214182.**

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at Mark.Harris@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

Sample Receipt:

Fourteen water samples were received for analysis at ALS Environmental on 12/01/2022. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Metals:

No significant anomalies were noted with this analysis.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Laboratory Results for: 2022-Gorgas

Dear Masa,

Enclosed are the results of the sample(s) submitted to our laboratory December 12, 2022
For your reference, these analyses have been assigned our service request number **K2214651.**

Analyses were performed according to our laboratory’s NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

Sample Receipt:

One water sample was received for analysis at ALS Environmental on 12/12/2022. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The sample was stored at minimum in accordance with the analytical method requirements.

Metals:

No significant anomalies were noted with this analysis.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Dear Masa,

Enclosed are the results of the sample(s) submitted to our laboratory December 12, 2022
For your reference, these analyses have been assigned our service request number **K2214653.**

Analyses were performed according to our laboratory’s NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Notes: Please Contact Masa (503-972-5001, mkanematsu@anchorqea.com) if running > 10X dilution. Please analyze by ICP-MS method 200.8 to achieve the MDL < 1 ppb. Some samples may have residual purple color associated with potassium permanganate (KMnO4). If those samples need to be diluted in order to not damage the ICP-MS, please do so and let Masa know the dilution factor.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Laboratory Results for: Plant Gorgas Treatability

Dear Masa,

Enclosed are the results of the sample(s) submitted to our laboratory February 27, 2023
For your reference, these analyses have been assigned our service request number **K2302336.**

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at Mark.Harris@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

Sample Receipt:

Sixteen water samples were received for analysis at ALS Environmental on 02/27/2023. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Metals:

No significant anomalies were noted with this analysis.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at www.ALSGlobal.com or at the accreditation bodies web site.

Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/anlayte is offered by that state.

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Matrix Spike and Matrix Spike Duplicate Data is presented for information purposes only. The matrix may or may not be relevant to samples reported in this report. The laboratory evaluates system performance based on the LCS and LCSD control limits.

Laboratory Results for: Plant Gorgas Treatability

Dear Masa,

Enclosed are the results of the sample(s) submitted to our laboratory March 01, 2023
For your reference, these analyses have been assigned our service request number **K2302469.**

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at Mark.Harris@alsglobal.com.

Respectfully submitted,

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

Sample Receipt:

One water sample was received for analysis at ALS Environmental on 03/01/2023. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The sample was stored at minimum in accordance with the analytical method requirements.

Metals:

No significant anomalies were noted with this analysis.

Approved by ______________________ Date 03/10/2023

SAMPLE DETECTION SUMMARY

This form includes only detections above the reporting levels. For a full listing of sample results, continue to the Sample Results section of this Report.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Client: Anchor QEA, LLC

Project: Gorgas

Sample Matrix: Water

Service Request: K2304400

Date Received: 04/17/2023

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

Sample Receipt:

Fourteen water samples were received for analysis at ALS Environmental on 04/17/2023. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Metals:

No significant anomalies were noted with this analysis.

SMO:

No significant anomalies were noted with this analysis.

RIGHT SOLUTIONS | RIGHT PARTNER

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Laboratory Results for: Gorgas

Dear Masa,

Enclosed are the results of the sample(s) submitted to our laboratory May 25, 2023
For your reference, these analyses have been assigned our service request number **K2305974.**

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at Mark.Harris@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

Sample Receipt:

Nine water samples were received for analysis at ALS Environmental on 05/25/2023. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Metals:

No significant anomalies were noted with this analysis.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Dear Masa,

Enclosed are the results of the sample(s) submitted to our laboratory May 25, 2023
For your reference, these analyses have been assigned our service request number **K2305975.**

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at Mark.Harris@alsglobal.com.

Respectfully submitted,

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

Sample Receipt:

Nine water samples were received for analysis at ALS Environmental on 05/25/2023. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Metals:

No significant anomalies were noted with this analysis.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Laboratory Results for: Gorgas

Dear Masa,

Enclosed are the results of the sample(s) submitted to our laboratory May 25, 2023
For your reference, these analyses have been assigned our service request number **K2305977.**

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at Mark.Harris@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

Sample Receipt:

Nine water samples were received for analysis at ALS Environmental on 05/25/2023. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Metals:

No significant anomalies were noted with this analysis.

Notes: All samples are HNO3-preserved and 0.45-um filtered. The comment section lists the chemical composition of the sample. Please Contact Masa (mkanematsu@anchorqea.com) if running > 10X dilution. Please analyze by ICP-MS method 200.8 to achieve the MDL < 1 ppb. **Please analyze on a standard TAT.**

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Laboratory Results for: Gorgas

Dear Masa,

Enclosed are the results of the sample(s) submitted to our laboratory May 25, 2023
For your reference, these analyses have been assigned our service request number **K2305983.**

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at Mark.Harris@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

Sample Receipt:

Nine water samples were received for analysis at ALS Environmental on 05/25/2023. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Metals:

No significant anomalies were noted with this analysis.

Notes: All samples are HNO3-preserved and 0.45-um filtered. The comment section lists the chemical composition of the sample. Please Contact Masa (mkanematsu@anchorqea.com) if running > 10X dilution. Please analyze by ICP-MS method 200.8 to achieve the MDL < 1 ppb. **Please analyze on a standard TAT.**

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Laboratory Results for: Gorgas

Dear Masa,

Enclosed are the results of the sample(s) submitted to our laboratory May 25, 2023
For your reference, these analyses have been assigned our service request number **K2305988.**

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at Mark.Harris@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

Sample Receipt:

One soil sample was received for analysis at ALS Environmental on 05/25/2023. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The sample was stored at minimum in accordance with the analytical method requirements.

Metals:

No significant anomalies were noted with this analysis.

Approved by ______________________ Date 06/14/2023

SAMPLE DETECTION SUMMARY

This form includes only detections above the reporting levels. For a full listing of sample results, continue to the Sample Results section of this Report.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at www.ALSGlobal.com or at the accreditation bodies web site.
Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/anlayte is offered by that state.
