Exceeds Limit: GC-AP-MW-1, GC-AP-MW-10, GC-AP-MW-11, GC-AP-MW-12, GC-AP-MW-13, GC-AP-MW-14, GC-AP-MW-15,...

Prediction Limit  
Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 140 background values. 94.29% NDs. Annual per-constituent alpha = 0.004341. Individual comparison alpha = 0.00009888 (1 of 2). Comparing 22 points to limit.

Constituent: Boron Analysis Run 7/14/2023 2:12 PM View: PLs  
Plant Greene County Client: Southern Company Data: Greene County AP

Exceeds Limit: GC-AP-MW-1, GC-AP-MW-10, GC-AP-MW-11, GC-AP-MW-12, GC-AP-MW-13, GC-AP-MW-14, GC-AP-MW-15,...

Prediction Limit  
Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 147 background values. Annual per-constituent alpha = 0.003992. Individual comparison alpha = 0.00009089 (1 of 2). Comparing 22 points to limit.

Constituent: Calcium Analysis Run 7/14/2023 2:12 PM View: PLs  
Plant Greene County Client: Southern Company Data: Greene County AP

Exceeds Limit: GC-AP-MW-1, GC-AP-MW-10, GC-AP-MW-11, GC-AP-MW-12, GC-AP-MW-14, GC-AP-MW-15, GC-AP-MW-16,...

Prediction Limit  
Interwell Parametric

Background Data Summary (based on natural log transformation): Mean=0.7467, Std. Dev.=0.4772, n=147, 3.401% NDs. Normality test: Chi Squared @alpha = 0.01, calculated = 11.3, critical = 14.07. Kappa = 2.119 (c=7, w=22, 1 of 2, event alpha = 0.05132). Report alpha = 0.007498. Individual comparison alpha = 0.000342. Comparing 22 points to limit.

Constituent: Chloride Analysis Run 7/14/2023 2:13 PM View: PLs  
Plant Greene County Client: Southern Company Data: Greene County AP

Exceeds Limit: GC-AP-MW-10, GC-AP-MW-12, GC-AP-MW-14, GC-AP-MW-16, GC-AP-MW-17, GC-AP-MW-18, GC-AP-MW-5,...

Prediction Limit  
Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 141 background values. 69.5% NDs. Annual per-constituent alpha = 0.004291. Individual comparison alpha = 0.00009774 (1 of 2). Comparing 22 points to limit.

Constituent: Fluoride Analysis Run 7/14/2023 2:13 PM View: PLs  
Plant Greene County Client: Southern Company Data: Greene County AP

Exceeds Limits: GC-AP-MW-12

### Prediction Limit Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limits are highest and lowest of 171 background values. Annual per-constituent alpha = 0.005924. Individual comparison alpha = 0.0001348 (1 of 2). Comparing 22 points to limit.

Constituent: pH Analysis Run 7/14/2023 2:13 PM View: PLs  
Plant Greene County Client: Southern Company Data: Greene County AP

Hollow symbols indicate censored values.

Exceeds Limit: GC-AP-MW-1, GC-AP-MW-10, GC-AP-MW-11, GC-AP-MW-12, GC-AP-MW-13, GC-AP-MW-14, GC-AP-MW-15,...

### Prediction Limit Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 147 background values. 20.41% NDs. Annual per-constituent alpha = 0.003992. Individual comparison alpha = 0.00009089 (1 of 2). Comparing 22 points to limit.

Constituent: Sulfate Analysis Run 7/14/2023 2:13 PM View: PLs  
Plant Greene County Client: Southern Company Data: Greene County AP

Exceeds Limit: GC-AP-MW-1, GC-AP-MW-10, GC-AP-MW-11, GC-AP-MW-12, GC-AP-MW-13, GC-AP-MW-14, GC-AP-MW-15,...

### Prediction Limit Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 147 background values. 15.65% NDs. Annual per-constituent alpha = 0.003992. Individual comparison alpha = 0.00009089 (1 of 2). Comparing 22 points to limit.

Notes:

1. mg/L - Milligrams per liter
2. pCi/L - Picocuries per liter
3. The background limits were used as the groundwater protection standard (GWPS) when appropriate under 40 CFR §257.95(h), ADEM Rule 335-13-15-.06(h), and the ADEM Variance.
4. GWPS established during second semi-annual sampling event in 2019.

### Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Antimony Analysis Run 7/19/2023 1:55 PM View: CIs  
Plant Greene County Client: Southern Company Data: Greene County AP

### Parametric Confidence Interval

Compliance limit is exceeded.\* Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Arsenic Analysis Run 7/19/2023 1:55 PM View: CIs  
Plant Greene County Client: Southern Company Data: Greene County AP

### Parametric and Non-Parametric (NP) Confidence Interval

Compliance limit is exceeded.\* Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Arsenic Analysis Run 7/19/2023 1:55 PM View: CIs  
Plant Greene County Client: Southern Company Data: Greene County AP

### Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Arsenic Analysis Run 7/19/2023 1:55 PM View: CIs  
Plant Greene County Client: Southern Company Data: Greene County AP

### Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Barium Analysis Run 7/19/2023 1:55 PM View: CIs  
 Plant Greene County Client: Southern Company Data: Greene County AP

### Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Barium Analysis Run 7/19/2023 1:56 PM View: CIs  
 Plant Greene County Client: Southern Company Data: Greene County AP

### Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Barium Analysis Run 7/19/2023 1:56 PM View: CIs  
 Plant Greene County Client: Southern Company Data: Greene County AP

### Non-Parametric Confidence Interval

Compliance Limit is not exceeded.

Constituent: Cadmium Analysis Run 7/19/2023 1:56 PM View: CIs  
 Plant Greene County Client: Southern Company Data: Greene County AP

### Non-Parametric Confidence Interval

Compliance Limit is not exceeded.

Constituent: Cadmium Analysis Run 7/19/2023 1:56 PM View: CIs  
Plant Greene County Client: Southern Company Data: Greene County AP

### Non-Parametric Confidence Interval

Compliance Limit is not exceeded.

Constituent: Chromium Analysis Run 7/19/2023 1:56 PM View: CIs  
Plant Greene County Client: Southern Company Data: Greene County AP

### Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Chromium Analysis Run 7/19/2023 1:56 PM View: CIs  
Plant Greene County Client: Southern Company Data: Greene County AP

### Non-Parametric Confidence Interval

Compliance Limit is not exceeded.

Constituent: Chromium Analysis Run 7/19/2023 1:56 PM View: CIs  
Plant Greene County Client: Southern Company Data: Greene County AP

### Parametric Confidence Interval

Compliance limit is exceeded.\* Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Cobalt Analysis Run 7/19/2023 1:56 PM View: Cls  
 Plant Greene County Client: Southern Company Data: Greene County AP

### Parametric and Non-Parametric (NP) Confidence Interval

Compliance limit is exceeded.\* Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Cobalt Analysis Run 7/19/2023 1:56 PM View: Cls  
 Plant Greene County Client: Southern Company Data: Greene County AP

### Parametric Confidence Interval

Compliance limit is exceeded.\* Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Cobalt Analysis Run 7/19/2023 1:56 PM View: Cls  
 Plant Greene County Client: Southern Company Data: Greene County AP

### Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Combined Radium 226 + 228 Analysis Run 7/19/2023 1:56 PM View: Cls  
 Plant Greene County Client: Southern Company Data: Greene County AP

### Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Combined Radium 226 + 228 Analysis Run 7/19/2023 1:56 PM View: Cls  
 Plant Greene County Client: Southern Company Data: Greene County AP

### Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Combined Radium 226 + 228 Analysis Run 7/19/2023 1:56 PM View: Cls  
 Plant Greene County Client: Southern Company Data: Greene County AP

### Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Fluoride Analysis Run 7/19/2023 1:56 PM View: Cls  
 Plant Greene County Client: Southern Company Data: Greene County AP

### Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Fluoride Analysis Run 7/19/2023 1:56 PM View: Cls  
 Plant Greene County Client: Southern Company Data: Greene County AP

### Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Fluoride Analysis Run 7/19/2023 1:56 PM View: Cls  
 Plant Greene County Client: Southern Company Data: Greene County AP

### Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Lead Analysis Run 7/19/2023 1:56 PM View: Cls  
 Plant Greene County Client: Southern Company Data: Greene County AP

### Parametric Confidence Interval

Compliance limit is exceeded.\* Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Lithium Analysis Run 7/19/2023 1:56 PM View: Cls  
 Plant Greene County Client: Southern Company Data: Greene County AP

### Parametric and Non-Parametric (NP) Confidence Interval

Compliance limit is exceeded.\* Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Lithium Analysis Run 7/19/2023 1:56 PM View: Cls  
 Plant Greene County Client: Southern Company Data: Greene County AP

### Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Molybdenum Analysis Run 7/19/2023 1:56 PM View: Cls  
 Plant Greene County Client: Southern Company Data: Greene County AP

### Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Molybdenum Analysis Run 7/19/2023 1:56 PM View: Cls  
 Plant Greene County Client: Southern Company Data: Greene County AP

### Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Selenium Analysis Run 7/19/2023 1:56 PM View: Cls  
 Plant Greene County Client: Southern Company Data: Greene County AP

### Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Thallium Analysis Run 7/19/2023 1:56 PM View: Cls  
 Plant Greene County Client: Southern Company Data: Greene County AP

# Confidence Interval

Constituent: Antimony (mg/L) Analysis Run 7/19/2023 2:19 PM View: Cls

# GROUNDWATER STATS CONSULTING

January 8, 2024

Southern Company Services  
Attn: Mr. Greg Budd  
3535 Colonnade Parkway  
Birmingham, AL 35243

Re: Plant Greene County Ash Pond  
2<sup>nd</sup> Semi-Annual Event – October/November 2023

Dear Mr. Budd,

Groundwater Stats Consulting, formerly the statistical consulting division of Sanitas Technologies, is pleased to provide the statistical analysis of groundwater data for the October/November 2023 2<sup>nd</sup> semi-annual sample event for Alabama Power Company's Plant Greene County Ash Pond. The analysis complies with the federal rule for the Disposal of Coal Combustion Residuals (CCR) from Electric Utilities (CCR Rule, 2015) as well as with the United States Environmental Protection Agency (USEPA) Unified Guidance (2009).

Sampling began at this site for the CCR program in 2016. The monitoring well network, as provided by Southern Company Services, consists of the following:

- **Upgradient wells:** GC-AP-MW-23, GC-AP-MW-24, GC-AP-MW-26, GC-AP-MW-27, GC-AP-MW-28, GC-AP-MW-29, and GC-AP-MW-30
- **Downgradient wells:** GC-AP-MW-1, GC-AP-MW-2, GC-AP-MW-3, GC-AP-MW-5, GC-AP-MW-6, GC-AP-MW-7, GC-AP-MW-8, GC-AP-MW-9, GC-AP-MW-10, GC-AP-MW-11, GC-AP-MW-12, GC-AP-MW-13, GC-AP-MW-14, GC-AP-MW-15, GC-AP-MW-16, GC-AP-MW-17, GC-AP-MW-18, GC-AP-MW-21, GC-AP-MW-25, GC-AP-MW-31, GC-AP-MW-32, and GC-AP-MW-33

- **Delineation wells:** GC-AP-PZ-4, GC-AP-MW-34HA, GC-AP-MW-35H, GC-AP-MW-36H, GC-AP-MW-37H, GC-AP-MW-38H, GC-AP-MW-39H, GC-AP-MW-40H, GC-AP-MW-41H, GC-AP-MW-42H, GC-AP-MW-43H, GC-AP-MW-44H, GC-AP-MW-45H, GC-AP-MW-46HO, GC-AP-MW-47HO, GC-AP-MW-48H, GC-AP-MW-49H, GC-AP-MW-50HO, GC-AP-MW-52HO, GC-AP-MW-53H, GC-AP-MW-54H, GC-AP-MW-55HO, GC-AP-MW-57H, GC-AP-MW-59HO, GC-AP-MW-60HO, GC-AP-MW-61HO, GC-AP-MW-62HO, GC-AP-MW-63HO, and GC-AP-MW-64HO

Note that delineation wells do not require statistics; therefore, data are plotted only on time series and box plots. Data were sent electronically to Groundwater Stats Consulting, and the statistical analysis was prepared according to the Statistical Analysis Plan approved by Dr. Kirk Cameron, Ph.D. Statistician with MacStat Consulting, primary author of the USEPA Unified Guidance, and Senior Advisor to Groundwater Stats Consulting. The analysis was reviewed by Andrew Collins, Project Manager for Groundwater Stats Consulting.

The CCR program consists of the following constituents:

- **Appendix III** (Detection Monitoring) - boron, calcium, chloride, fluoride, pH, sulfate, and TDS
- **Appendix IV** (Assessment Monitoring) - antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, combined radium 226 + 228, fluoride, lead, lithium, mercury, molybdenum, selenium, and thallium

Note that when there are no detections present in downgradient wells for a given constituent, statistical analyses are not required. A list of Appendix IV downgradient well/constituent pairs containing 100% non-detects follows this letter. Due to historic varying detection limits, the following reporting limits were substituted across all wells:

- Arsenic: 0.000203 mg/L
- Cadmium: 0.000203 mg/L
- Chromium: 0.001015 mg/L
- Cobalt: 0.000203 mg/L
- Fluoride: 0.04 mg/L
- Lead: 0.000203 mg/L
- Molybdenum: 0.01015 mg/L
- Selenium: 0.001015 mg/L
- Thallium: 0.000203 mg/L

Time series plots for Appendix III and IV parameters at all wells are provided for the purpose of screening data at these wells (Figure A). A substitution of the most recent reporting limit is used for non-detect data. Additionally, a separate section of box plots is included for all constituents at upgradient and downgradient wells (Figure B). The time series plots are used to initially screen for suspected outliers and trends, while the box plots provide visual representation of variation within individual wells and between all wells.

In earlier analyses, data at all wells were evaluated for the following: 1) outliers; 2) trends; 3) most appropriate statistical method for Appendix III parameters based on analysis of the spatial variability of groundwater quality data among wells upgradient of the facility; and 4) eligibility of downgradient wells when intrawell statistical methods are recommended. The power curve provided in this report demonstrates that the selected statistical methods for Appendix III parameters complies with the USEPA Unified Guidance. The EPA suggests that the selected statistical method should provide at least 55% power at 3 standard deviations or at least 80% power at 4 standard deviations. Power curves are based on the following statistical methods and site/data characteristics:

- Semi-Annual Sampling
- Interwell Prediction Limits with 1-of-2 resample plan
- # Background Samples: 144
- # Constituents: 7
- # Downgradient wells: 22

### **Summary of Statistical Methods – Appendix III Parameters**

Based on the earlier evaluation described above, interwell prediction limits were utilized in the analysis of this site.

Parametric prediction limits are utilized when the screened historical data follow a normal or transformed-normal distribution. When data cannot be normalized or the majority of data are non-detects, a nonparametric test is utilized. While the annual false positive rate associated with parametric limits is fixed at 10% as recommended by the EPA Unified Guidance (2009), the false-positive rate associated with nonparametric limits is not fixed and depends upon the available background sample size, number of future comparisons, and verification resample plan. The distribution of data is tested using the Shapiro-Wilk/Shapiro-Francia test for normality. After testing for normality and performing any adjustments as discussed below (US EPA, 2009), data are analyzed using either parametric or non-parametric prediction limits as appropriate.

- No statistical analyses are required on wells and analytes containing 100% non-detects (USEPA Unified Guidance, 2009, Chapter 6).
- When data contain <15% non-detects, simple substitution of one-half of the reporting limit is utilized in the statistical analysis. The reporting limit utilized for non-detects is the most recent practical quantification limit (PQL) as reported by the laboratory.
- When data contain between 15-50% non-detects, the Kaplan-Meier non-detect adjustment is applied to the background data for parametric limits. This technique adjusts the mean and standard deviation of the historical concentrations to account for concentrations below the reporting limit.
- Nonparametric prediction limits are used on data containing greater than 50% non-detects.

Natural systems continuously evolve due to physical changes made to the environment. Examples include capping a landfill, paving areas near a well, or lining a drainage channel to prevent erosion. Periodic updating of background statistical limits is necessary to accommodate these types of changes. In the interwell case, prediction limits are updated with upgradient well data following each sampling event after careful screening for any new outliers. In some cases, such as pH, deselecting the earlier portion of data may be necessary prior to construction of limits so that resulting statistical limits are conservative (lower) from a regulatory perspective and capable of rapidly detecting changes in groundwater quality. Even though the data are excluded from the calculation, the values will continue to be reported and shown in tables and graphs.

## **Background Update Summary**

Interwell prediction limits, which compare the most recent sample from each downgradient well to statistical limits constructed from pooled upgradient well data, are updated during each sample event. Data from upgradient wells are periodically re-screened for newly developing trends, which may require adjustment of the background period to eliminate trends, as well as for outliers over the entire record. Interwell prediction limits are used to evaluate boron, calcium, chloride, fluoride, pH, sulfate, and TDS.

## Outlier Analysis

Prior to constructing prediction limits, proposed background data through October/November 2023 at upgradient wells for boron, calcium, chloride, fluoride, pH, sulfate, and TDS.

Tukey's outlier tests identified outliers for chloride, fluoride, pH, sulfate, and TDS. Previously flagged values were confirmed by visual screening and Tukey's outlier tests. No additional measurements for Appendix III parameters were flagged as concentrations identified by Tukey's test appeared to be representative of spatial variation or were similar to other measurements among pooled upgradient well data.

Outliers are flagged with "o" and excluded to reduce variation, better represent background conditions, and provide limits that are conservative (i.e., lower) from a regulatory perspective. As mentioned above, flagged data are displayed in a lighter font and as a disconnected symbol on the time series reports, as well as in a lighter font on the accompanying data pages. A summary Tukey's test results along with a list of flagged outliers follows this report (Figure C).

### Upgradient Well Trend Tests

The Sen's Slope/Mann Kendall trend test was used to evaluate the entire record of data from upgradient wells during the original screening for parameters utilizing interwell prediction limits at the 99% confidence level (Figure D). When statistically significant increasing trends are identified in upgradient wells, deselection of the earlier portion of data may be required prior to construction of interwell statistical limits if the trending data would result in statistical limits that are not conservative from a regulatory perspective. The following well/constituent pairs had statistically significant trends:

#### Increasing:

- Calcium: GC-AP-MW-24
- Chloride: GC-AP-MW-27
- Sulfate: GC-AP-MW-24, GC-AP-MW-27, and GC-AP-MW-28
- TDS: GC-AP-MW-24

#### Decreasing:

- Calcium: GC-AP-MW-23, GC-AP-MW-28, GC-AP-MW-29, and GC-AP-MW-30
- Chloride: GC-AP-MW-23
- pH: GC-AP-MW-23, GC-AP-MW-24, GC-AP-MW-27, GC-AP-MW-28, GC-AP-MW-29, and GC-AP-MW-30
- Sulfate: GC-AP-MW-23
- TDS: GC-AP-MW-23, GC-AP-MW-28, and GC-AP-MW-29

The majority of trends required no adjustments as the period of record was short and/or the magnitudes of the trends were low relative to the average concentrations in background.

Exceptions include the trends for pH at upgradient wells GC-AP-MW-23, GC-AP-MW-24, GC-AP-MW-27, GC-AP-MW-28, GC-AP-MW-29, and GC-AP-MW-30. The earlier portions of the records were truncated to remove the magnitude of the trend and construct statistical limits that are more representative of present-day groundwater quality conditions.

Note that statistically significant increasing trends were identified at upgradient well GC-AP-MW-24 for calcium, sulfate, and TDS. However, the more recent reported observations for calcium and TDS were similar to those observed in upgradient well GC-AP-MW-23; therefore, no adjustments were required for these constituents. Additionally, no adjustment was required for calcium, sulfate, and TDS since the statistical limit was representative of present-day groundwater quality conditions, was a nonparametric prediction limit constructed based on the highest report concentration among the upgradient wells, and was not influenced by the magnitude of the trend. All data at upgradient wells are continually monitored, as mentioned earlier, and will be adjusted in future analyses as necessary. A summary of any adjusted records will accompany the report.

## **Evaluation of Appendix III Parameters – October/November 2023**

### Interwell Prediction Limits

Interwell prediction limits combined with a 1-of-2 verification strategy were constructed for all Appendix III parameters (Figure E). Interwell prediction limits pool upgradient well data through October/November 2023 to establish a background limit for an individual constituent. The most recent sample from each downgradient well is compared to the background limit to determine whether initial exceedances are present.

In the event of an initial exceedance of compliance well data, the 1-of-2 resample plan allows for collection of one additional sample to determine whether the initial exceedance is confirmed. When the resample confirms the initial exceedance, a statistically significant increase (SSI) is identified, and further research would be required to identify the cause of the exceedance (i.e., impact from the site, natural variation, or an off-site source). If a resample falls within the statistical limit, the initial exceedance is considered to be a false positive result; therefore, no further action is necessary. When no resamples are collected, any initial exceedances are considered SSIs. A summary of the prediction limits results may be found in the Prediction Limit Summary tables following this letter. Several exceedances for interwell prediction limits were identified.

## Trend Tests – Prediction Limit Exceedances

When prediction limit exceedances are identified in downgradient wells, data are further evaluated using the Sen's Slope/Mann Kendall trend test to determine whether concentrations are statistically increasing, decreasing, or stable at the 99% confidence level (Figure F). Upgradient wells are included in the trend analyses for all parameters found to exceed their prediction limit in downgradient wells. When similar patterns exist upgradient of the site, it is an indication of variability in groundwater which may be unrelated to practices at the site. A summary of the trend test results follows this letter. Statistically significant trends were identified for the following well/constituent pairs:

### Increasing:

- Boron: GC-AP-MW-5, GC-AP-MW-9, GC-AP-MW-10, GC-AP-MW-14, GC-AP-MW-15, GC-AP-MW-16, GC-AP-MW-17, and GC-AP-MW-25
- Calcium: GC-AP-MW-2, GC-AP-MW-5, GC-AP-MW-6, GC-AP-MW-8, GC-AP-MW-9, GC-AP-MW-10, GC-AP-MW-11, GC-AP-MW-14, GC-AP-MW-15, GC-AP-MW-16, GC-AP-MW-17, and GC-AP-MW-24 (upgradient)
- Chloride: GC-AP-MW-6, GC-AP-MW-7, GC-AP-MW-9, GC-AP-MW-31, and GC-AP-MW-27 (upgradient)
- Fluoride: GC-AP-MW-3, GC-AP-MW-14, GC-AP-MW-16, and GC-AP-MW-17
- pH: GC-AP-MW-16 and GC-AP-MW-17
- Sulfate: GC-AP-MW-24, GC-AP-MW-27, GC-AP-MW-28 (all upgradient), GC-AP-MW-2, GC-AP-MW-5, GC-AP-MW-6, GC-AP-MW-10, and GC-AP-MW-11
- TDS: GC-AP-MW-24 (upgradient), GC-AP-MW-2, GC-AP-MW-5, GC-AP-MW-6, GC-AP-MW-9, GC-AP-MW-10, GC-AP-MW-11, GC-AP-MW-14, GC-AP-MW-16, GC-AP-MW-17, and GC-AP-MW-25

### Decreasing:

- Boron: GC-AP-MW-6 and GC-AP-MW-18
- Calcium: GC-AP-MW-23, GC-AP-MW-28, GC-AP-MW-29, GC-AP-MW-30 (all upgradient), and GC-AP-MW-1
- Chloride: GC-AP-MW-3, GC-AP-MW-5, GC-AP-MW-14, GC-AP-MW-16, GC-AP-MW-17, and GC-AP-MW-23 (upgradient)
- pH: GC-AP-MW-23, GC-AP-MW-24, GC-AP-MW-27, GC-AP-MW-28, GC-AP-MW-29, and GC-AP-MW-30 (all upgradient)
- Sulfate: GC-AP-MW-15 and GC-AP-MW-23 (upgradient)
- TDS: GC-AP-MW-23, GC-AP-MW-28, GC-AP-MW-29 (all upgradient), and GC-AP-MW-3

## **Evaluation of Appendix IV Parameters – October/November 2023**

Prior to evaluating Appendix IV parameters, upgradient well data were screened through visual screening and Tukey's outlier test for potential outliers and extreme trending patterns that would lead to artificially elevated statistical limits. A discussion of those findings is provided below.

Tukey's outlier test on pooled upgradient well data for Appendix IV parameters through October/November 2023 identified values for barium, cobalt, combined radium 226 + 228, and fluoride. However, no additional outliers were flagged for barium, cobalt, combined radium, or fluoride as all measurements appeared to be representative of spatial variation or were similar to remaining concentrations among upgradient well data. Previously flagged values were confirmed by visual screening and Tukey's outlier test.

Additionally, downgradient well data through October/November 2023 were screened through visual screening using time series graphs. Since the downgradient well data are used to construct confidence intervals, a regulatory conservative approach is taken in that values that are marginally high relative to the rest of the data are retained unless there is particular justification for excluding them. Visual screening confirmed previously flagged outliers. No changes were made to previously flagged data were made among downgradient wells for Appendix IV parameters. A summary of flagged outliers follows this report (Figure C).

### Interwell Upper Tolerance Limits

Background limits were determined using upper tolerance limits (UTLs) constructed from pooled upgradient well data through October/November 2023 (Figure G). The tolerance limits contain a known fraction (coverage) of the background population with a known level of confidence. The confidence and coverage levels for nonparametric tolerance limits are dependent upon the number of background samples. As requested by ADEM to eliminate variation among upgradient well data, nonparametric tolerance limits, which use the highest value in screened background as the statistical limit, were constructed. A summary of the upper tolerance limits follows this letter.

### Groundwater Protection Standards

These background limits are then compared to the Maximum Contaminant Levels (MCLs) for each parameter, and the higher of the two is used as the GWPS (Figure H) in the confidence interval comparisons described below.

In accordance with Alabama Department of Environmental Management, the Groundwater Protections Standards (GWPS) were updated during this 2023 2<sup>nd</sup> semi-annual statistical analysis. The GWPS will be updated again during the 2025 2<sup>nd</sup> semi-annual statistical analysis. The methodology used to create these GWPS is described below.

### Confidence Intervals

Confidence intervals were then constructed on downgradient wells using a maximum of the most recent 8 samples through October/November 2023 for each of the Appendix IV parameters (Figure I). These intervals were either parametric or nonparametric confidence intervals depending on the data distribution and percentage of non-detects. When data followed a normal or transformed-normal distribution, parametric confidence intervals were used for Appendix IV parameters. Nonparametric confidence intervals, which use the highest and lowest values as interval limits when n=8, were constructed when data did not follow a normal or transformed-normal distribution or when there were greater than 50% non-detects. The lower confidence limit, which is constructed with 99% confidence for parametric confidence intervals, is compared to the GWPS prepared as described above. The confidence level associated with nonparametric confidence intervals is dependent upon the number samples available.

As mentioned above, well/constituent pairs containing 100% non-detects in the most recent 8 samples did not require statistics; therefore, they were deselected prior to construction of confidence intervals. A list of deselected well/constituent pairs follows this report. Each confidence interval was compared with the corresponding GWPS. Only when the entire confidence interval is above the GWPS is the well/constituent pair considered to exceed its respective standard. Both a tabular summary and graphical presentation of the confidence interval results follow this letter. Exceedances were noted for the following well/constituent pairs:

- Arsenic: GC-AP-MW-1, GC-AP-MW-5, GC-AP-MW-10, GC-AP-MW-14, GC-AP-MW-16, GC-AP-MW-17, and GC-AP-MW-18
- Cobalt: GC-AP-MW-1, GC-AP-MW-2, GC-AP-MW-9, GC-AP-MW-10, GC-AP-MW-11, GC-AP-MW-14, and GC-AP-MW-15
- Lithium: GC-AP-MW-5, GC-AP-MW-10, GC-AP-MW-11, GC-AP-MW-12, GC-AP-MW-13, GC-AP-MW-14, GC-AP-MW-15, GC-AP-MW-16, GC-AP-MW-17, GC-AP-MW-18, and GC-AP-MW-21

## Trend Test Evaluation – Appendix IV

When confidence interval exceedances are identified in downgradient wells, data are further evaluated using the Sen's Slope/Mann Kendall trend test to determine whether concentrations are statistically increasing, decreasing, or stable at the 95% confidence level (Figure J). Utilizing the 95% confidence level for trend tests readily identifies significant trends and is more sensitive than the 99% confidence level without drastically increasing the false negative rate. Upgradient wells are included in the trend analyses for all parameters found to exceed their confidence intervals in downgradient wells. When similar patterns exist upgradient of the site, it is an indication of variability in groundwater which may be unrelated to practices at the site. Statistically significant trends were identified for the following well/constituent pairs:

### Increasing:

- Arsenic: GC-AP-MW-14 and GC-AP-MW-17
- Cobalt: GC-AP-MW-1, GC-AP-MW-2, GC-AP-MW-9, GC-AP-MW-10, GC-AP-MW-14, and GC-AP-MW-15
- Lithium: GC-AP-MW-10 and GC-AP-MW-11

### Decreasing:

- Arsenic: GC-AP-MW-26, GC-AP-MW-29 (both upgradient), and GC-AP-MW-18
- Cobalt: GC-AP-MW-26, GC-AP-MW-27, GC-AP-MW-29, GC-AP-MW-30 (all upgradient), and GC-AP-MW-11
- Lithium: GC-AP-MW-12, GC-AP-MW-15, GC-AP-MW-18, and GC-AP-MW-21

Thank you for the opportunity to assist you in the statistical analysis of groundwater quality for Plant Greene County Ash Pond. If you have any questions or comments, please feel free to contact us.

Notes:

1. mg/L - Milligrams per liter
2. pCi/L - Picocuries per liter
3. The background limits were used as the groundwater protection standard (GWPS) when appropriate under 40 CFR §257.95(h), ADEM Rule 335-13-15-.06(h), and the ADEM Variance.
4. GWPS established during second semi-annual sampling event in 2019.

### Tukey's Outlier Screening, Pooled Background

GC-AP-MW-23,GC-AP-MW-24,GC-AP-MW-26...

n = 147  
 No outliers found.  
 Tukey's method selected by user.  
 Data were x<sup>6</sup> transformed to achieve best W statistic (graph shown in original units).  
 The results were invalidated, because the lower and upper quartiles are equal.

Constituent: Antimony Analysis Run 1/1/2024 5:19 PM View: Tukey's Outlier Test  
 Plant Greene County Data: Greene County AP

### Tukey's Outlier Screening, Pooled Background

GC-AP-MW-23,GC-AP-MW-24,GC-AP-MW-26...

n = 147  
 No outliers found.  
 Tukey's method selected by user.  
 Data were x<sup>6</sup> transformed to achieve best W statistic (graph shown in original units).  
 The results were invalidated, because the lower and upper quartiles are equal.

Constituent: Calcium Analysis Run 1/1/2024 4:52 PM View: Appendix III Trend Test - Upgradient Wells  
Plant Greene County Data: Greene County AP

### Sen's Slope Estimator

GC-AP-MW-29 (bg)

n = 22  
 Slope = -0.1205  
 units per year.  
 Mann-Kendall  
 statistic = -142  
 critical = -92  
 Decreasing trend  
 significant at 99%  
 confidence level  
 ( $\alpha = 0.005$  per  
 tail).

Constituent: Calcium Analysis Run 1/1/2024 4:52 PM View: Appendix III Trend Test - Upgradient Wells  
 Plant Greene County Data: Greene County AP

### Sen's Slope Estimator

GC-AP-MW-30 (bg)

n = 22  
 Slope = -0.1081  
 units per year.  
 Mann-Kendall  
 statistic = -129  
 critical = -92  
 Decreasing trend  
 significant at 99%  
 confidence level  
 ( $\alpha = 0.005$  per  
 tail).

Exceeds Limit: GC-AP-MW-1, GC-AP-MW-10, GC-AP-MW-11, GC-AP-MW-12, GC-AP-MW-13, GC-AP-MW-14, GC-AP-MW-15,...

Prediction Limit  
Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 147 background values. 94.56% NDs. Annual per-constituent alpha = 0.003992. Individual comparison alpha = 0.00009089 (1 of 2). Comparing 22 points to limit.

Constituent: Boron Analysis Run 1/3/2024 8:23 AM View: Appendix III  
Plant Greene County Data: Greene County AP

Exceeds Limit: GC-AP-MW-1, GC-AP-MW-10, GC-AP-MW-11, GC-AP-MW-14, GC-AP-MW-15, GC-AP-MW-16, GC-AP-MW-17,...

Prediction Limit  
Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 154 background values. Annual per-constituent alpha = 0.003642. Individual comparison alpha = 0.00008291 (1 of 2). Comparing 22 points to limit.

Constituent: Calcium Analysis Run 1/3/2024 8:23 AM View: Appendix III  
Plant Greene County Data: Greene County AP

Exceeds Limit: GC-AP-MW-1, GC-AP-MW-10, GC-AP-MW-11, GC-AP-MW-13, GC-AP-MW-14, GC-AP-MW-15, GC-AP-MW-16,...

Prediction Limit  
Interwell Parametric

Background Data Summary (based on natural log transformation): Mean=0.7433, Std. Dev.=0.475, n=154, 3.247% NDs. Normality test: Chi Squared @alpha = 0.01, calculated = 13.66, critical = 14.07. Kappa = 2.118 (c=7, w=22, 1 of 2, event alpha = 0.05132). N exceeds UG tables; Kappa based on n=150. Report alpha = 0.007498. Individual comparison alpha = 0.000342. Comparing 22 points to limit.

Constituent: Chloride Analysis Run 1/3/2024 8:24 AM View: Appendix III  
Plant Greene County Data: Greene County AP

Exceeds Limit: GC-AP-MW-10, GC-AP-MW-12, GC-AP-MW-14, GC-AP-MW-16, GC-AP-MW-17, GC-AP-MW-18, GC-AP-MW-3,...

Prediction Limit  
Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 148 background values. 68.24% NDs. Annual per-constituent alpha = 0.003942. Individual comparison alpha = 0.00008975 (1 of 2). Comparing 22 points to limit.

Constituent: Fluoride Analysis Run 1/3/2024 8:24 AM View: Appendix III  
Plant Greene County Data: Greene County AP

Exceeds Limits: GC-AP-MW-10, GC-AP-MW-12, GC-AP-MW-14, GC-AP-MW-16, GC-AP-MW-17, GC-AP-MW-5, GC-AP-MW-7

Prediction Limit  
Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limits are highest and lowest of 144 background values. Annual per-constituent alpha = 0.008283. Individual comparison alpha = 0.0001886 (1 of 2). Comparing 22 points to limit.

Constituent: pH Analysis Run 1/3/2024 8:24 AM View: Appendix III  
Plant Greene County Data: Greene County AP

Exceeds Limit: GC-AP-MW-1, GC-AP-MW-10, GC-AP-MW-11, GC-AP-MW-14, GC-AP-MW-15, GC-AP-MW-2, GC-AP-MW-5...

Prediction Limit  
Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 154 background values. 19.48% NDs. Annual per-constituent alpha = 0.003642. Individual comparison alpha = 0.00008291 (1 of 2). Comparing 22 points to limit.

Constituent: Sulfate Analysis Run 1/3/2024 8:24 AM View: Appendix III  
Plant Greene County Data: Greene County AP

Exceeds Limit: GC-AP-MW-1, GC-AP-MW-10, GC-AP-MW-11, GC-AP-MW-12, GC-AP-MW-13, GC-AP-MW-14, GC-AP-MW-15...

Prediction Limit  
Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 154 background values. 16.23% NDs. Annual per-constituent alpha = 0.003642. Individual comparison alpha = 0.00008291 (1 of 2). Comparing 22 points to limit.

### Sen's Slope Estimator

GC-AP-MW-1

Constituent: Boron Analysis Run 1/8/2024 11:46 AM View: Appendix III - Trend Tests  
Plant Greene County Client: Southern Company Data: Greene County AP

### Sen's Slope Estimator

GC-AP-MW-10

Constituent: Boron Analysis Run 1/8/2024 11:46 AM View: Appendix III - Trend Tests  
Plant Greene County Client: Southern Company Data: Greene County AP

### Sen's Slope Estimator

GC-AP-MW-11

Constituent: Boron Analysis Run 1/8/2024 11:46 AM View: Appendix III - Trend Tests  
Plant Greene County Client: Southern Company Data: Greene County AP

### Sen's Slope Estimator

GC-AP-MW-12

Constituent: Boron Analysis Run 1/8/2024 11:46 AM View: Appendix III - Trend Tests  
Plant Greene County Client: Southern Company Data: Greene County AP

### Sen's Slope Estimator

GC-AP-MW-13

Constituent: Boron Analysis Run 1/8/2024 11:46 AM View: Appendix III - Trend Tests  
Plant Greene County Client: Southern Company Data: Greene County AP

### Sen's Slope Estimator

GC-AP-MW-14

Constituent: Boron Analysis Run 1/8/2024 11:46 AM View: Appendix III - Trend Tests  
Plant Greene County Client: Southern Company Data: Greene County AP

### Sen's Slope Estimator

GC-AP-MW-15

Constituent: Boron Analysis Run 1/8/2024 11:46 AM View: Appendix III - Trend Tests  
Plant Greene County Client: Southern Company Data: Greene County AP

### Sen's Slope Estimator

GC-AP-MW-16

Constituent: Boron Analysis Run 1/8/2024 11:46 AM View: Appendix III - Trend Tests  
Plant Greene County Client: Southern Company Data: Greene County AP

### Sen's Slope Estimator

GC-AP-MW-17

Constituent: Boron Analysis Run 1/8/2024 11:46 AM View: Appendix III - Trend Tests  
Plant Greene County Client: Southern Company Data: Greene County AP

### Sen's Slope Estimator

GC-AP-MW-18

Constituent: Boron Analysis Run 1/8/2024 11:46 AM View: Appendix III - Trend Tests  
Plant Greene County Client: Southern Company Data: Greene County AP

### Sen's Slope Estimator

GC-AP-MW-2

Constituent: Boron Analysis Run 1/8/2024 11:46 AM View: Appendix III - Trend Tests  
Plant Greene County Client: Southern Company Data: Greene County AP

### Sen's Slope Estimator

GC-AP-MW-21

Constituent: Boron Analysis Run 1/8/2024 11:46 AM View: Appendix III - Trend Tests  
Plant Greene County Client: Southern Company Data: Greene County AP

### Sen's Slope Estimator

GC-AP-MW-23 (bg)

Constituent: Boron Analysis Run 1/8/2024 11:46 AM View: Appendix III - Trend Tests  
Plant Greene County Client: Southern Company Data: Greene County AP

### Sen's Slope Estimator

GC-AP-MW-24 (bg)

Constituent: Boron Analysis Run 1/8/2024 11:46 AM View: Appendix III - Trend Tests  
Plant Greene County Client: Southern Company Data: Greene County AP

### Sen's Slope Estimator

GC-AP-MW-25

Constituent: Boron Analysis Run 1/8/2024 11:46 AM View: Appendix III - Trend Tests  
Plant Greene County Client: Southern Company Data: Greene County AP

### Sen's Slope Estimator

GC-AP-MW-26 (bg)

Constituent: Boron Analysis Run 1/8/2024 11:46 AM View: Appendix III - Trend Tests  
Plant Greene County Client: Southern Company Data: Greene County AP

### Sen's Slope Estimator

GC-AP-MW-27 (bg)

Constituent: Boron Analysis Run 1/8/2024 11:46 AM View: Appendix III - Trend Tests  
Plant Greene County Client: Southern Company Data: Greene County AP

### Sen's Slope Estimator

GC-AP-MW-28 (bg)

Constituent: Boron Analysis Run 1/8/2024 11:46 AM View: Appendix III - Trend Tests  
Plant Greene County Client: Southern Company Data: Greene County AP

### Sen's Slope Estimator

GC-AP-MW-29 (bg)

Constituent: Boron Analysis Run 1/8/2024 11:46 AM View: Appendix III - Trend Tests  
Plant Greene County Client: Southern Company Data: Greene County AP

### Sen's Slope Estimator

Molybdenum	mg/L	0.01015	0.1
Selenium	mg/L	0.0072	0.05
Thallium	mg/L	0.00039	0.002

Notes:

1. mg/L - Milligrams per liter
2. pCi/L - Picocuries per liter
3. The background limits were used as the groundwater protection standard (GWPS) when appropriate under 40 CFR §257.95(h), ADEM Rule 335-13-15-.06(h), and the ADEM Variance.
4. GWPS established during second semi-annual sampling event in 2019.

# 1 Introduction

As discussed in the *Groundwater Remedy Selection Report* (Anchor QEA 2021), geochemical manipulation via injections was selected as one corrective measure for constituents of interest (COIs) at the Greene County Electric Generating Plant (Plant Greene County) Ash Pond (Site), located in Greene County, Alabama. COIs at the Site are arsenic, cobalt, and lithium. Geochemical manipulation removes COIs from groundwater and immobilizes them in situ through the creation of solid precipitates formed from injection of treatment solutions (reagents). COIs adhere to the solid surfaces and are incorporated into the solid structures. Geochemical manipulation was selected because of its effectiveness, ease of implementation, versatility (ability to treat more than one COI), ability to implement in areas with limited working space, and because it produces no byproducts that would require further treatment or disposal. Before geochemical manipulation via injection treatment can be implemented, laboratory treatability studies need to be performed using the Site aquifer media (soil) and impacted groundwater.

Site-specific treatability studies were initially conducted in 2022 to evaluate reagent selection, dosing, and injection sequencing for in situ groundwater remediation. Results of these studies were presented in the *Laboratory Treatability Study Results* (Anchor QEA 2023). Recommendations from the initial laboratory treatability studies include field testing of the most promising reagent mix, ferric chloride ( $\text{FeCl}_3$ ) + manganese chloride ( $\text{MnCl}_2$ ) + magnesium chloride ( $\text{MgCl}_2$ ) solution, followed by sodium aluminate ( $\text{NaAlO}_2$ ) + potassium permanganate ( $\text{KMnO}_4$ ) solution + sodium hydroxide ( $\text{NaOH}$ ) for pH adjustment to 9.5, referred to as Reagent Mix C.

Reagent Mix C requires in situ mixing in the aquifer (i.e., two-solution treatment), which has been implemented in the field in March 2021 and September 2023 by Anchor QEA as part of an Electric Power Research Institute research project. However, supplemental laboratory testing was recommended to simplify field applications where lithium is not present at the Site (i.e., only arsenic and/or cobalt are COIs). Specifically, additional column tests were recommended to evaluate a single-solution  $\text{KMnO}_4$  + sodium bicarbonate ( $\text{NaHCO}_3$ ) treatment for effectiveness in removing arsenic and cobalt from Site groundwater, potential inadvertent Appendix III/IV constituent release from the aquifer matrix, and treatment stability. In 2023, supplemental column studies with  $\text{KMnO}_4$  +  $\text{NaHCO}_3$  treatment were performed on groundwater from two locations, GC-AP-MW-1 and GC-AP-MW-44H. The results of these supplemental column studies are presented in this report.

## 2 Sampling and Initial Characterization

For the 2022 treatability studies, groundwater samples and aquifer soils were collected from the Site for treatability testing conducted at the Anchor QEA Environmental Geochemistry Laboratory (EGL) in Portland, Oregon. Initial soil and groundwater characterization results are presented in the *Laboratory Treatability Study Results* (Anchor QEA 2023). For the 2023 supplemental testing, the soil samples collected for the 2022 treatability studies were used (GC-AP-PT-1 and GC-AP-PT-5). Additional groundwater samples were collected on May 16, 2023, by Alabama Power Company (APC) with support from Anchor QEA from wells GC-AP-MW-1, GC-AP-MW-44H, and upgradient well GC-AP-MW-23 (Figure 1) for supplemental column testing. Initial groundwater characterization results for the additional samples are presented in Table 1.

Prior to sampling, monitoring wells were purged until water quality parameters (pH, temperature, specific conductivity [SC], oxidation reduction potential [ORP], and dissolved oxygen [DO]) stabilized. Then, groundwater samples were collected in low-density polyethylene Cubitainers. Cubitainers were filled with zero headspace and packed in Mylar barrier bags containing oxygen-absorbent packets to minimize potential changes in redox conditions during transport to the EGL. Anaerobic conditions were maintained during groundwater sample handling at the EGL.

Groundwater samples collected in the field were also sent directly to the APC Environmental Laboratory in Calera, Alabama, and Pace Analytical Services, LLC, and analyzed for major cations, anions, COIs, other Appendix III/IV parameters, and water quality parameters influencing the chemical behavior of the COIs (Table 1). Prior to commencing treatability testing at the EGL, groundwater samples in the received Cubitainers were subsampled and submitted to ALS Environmental in Kelso, Washington, for confirmatory analysis of COIs and dissolved iron and manganese concentrations (Table 1). Laboratory analytical reports for groundwater samples submitted by EGL are included in Appendix A. Water quality parameters including pH, ORP, SC, and DO were measured at the EGL and are provided in Table 1.

### 3 Column Tests

Column tests were conducted to simulate injection applications and to evaluate the COI removal performance of aquifer soils treated with selected reagents under flow conditions. Column tests simulate treatment under groundwater flow conditions better than batch tests because they provide information on removal efficiency, capacity, and stability. Column test results can also confirm whether selected reagents will inadvertently increase concentrations of Appendix III/IV constituents above the groundwater protection standard (GWPS), for example, due to release from the aquifer matrix.

#### 3.1 Methodology

The following two supplemental column tests were performed: 1) groundwater from GC-AP-MW-1 was used as the influent for the treated GC-AP-PT-1 (11.0 to 25.0 feet) soil column; and 2) groundwater from GC-AP-MW-44H was used as the influent for the treated GC-AP-PT-5 (12.0 to 22.0 feet) soil column. Aquifer soil samples were paired with the respective groundwater samples based on their sampling location proximity. The pairs of groundwater and aquifer soils used in the supplemental column tests are provided in Table 2; a summary of the column test setup is provided in Table 3.

The initial arsenic concentrations in the Site groundwater samples collected from GC-AP-MW-1 for column testing were approximately equal to the GWPS (10 micrograms per liter [ $\mu\text{g/L}$ ]; Table 1). The groundwater in the GC-AP-MW-1 influent reservoir was, therefore, spiked with arsenic to more effectively evaluate COI removal efficiency, capacity, and stability. An arsenic stock solution was prepared from sodium arsenate heptahydrate ( $\text{Na}_2\text{HAsO}_4 \cdot 7\text{H}_2\text{O}$ ) and added to the influent reservoir of GC-AP-MW-1 to produce influent arsenic concentrations of approximately 2,000  $\mu\text{g/L}$ . This spiked arsenic concentration is higher than historical concentrations, which range from 12 to 27  $\mu\text{g/L}$ , recognizing that, during the column tests, some arsenic would be removed from the aqueous phase due to oxidation of dissolved iron in the groundwater and subsequent sequestration.

Reagent  $\text{KMnO}_4$  + pH buffer  $\text{NaHCO}_3$  was prepared by mixing the reagents in deionized water to create a stock solution. Stock solution  $\text{KMnO}_4$  +  $\text{NaHCO}_3$  (single-solution treatment) was mixed with the aquifer soils to produce  $\text{KMnO}_4$  +  $\text{NaHCO}_3$  treated soils. The dose of  $\text{KMnO}_4$  +  $\text{NaHCO}_3$  was determined by calculating the potassium permanganate required to fully react with soil reductants (soil oxidant demand) and with dissolved iron concentrations in groundwater. Soil oxidant demand was determined using the EGL standard operating procedure adapted from Haselow et al. (2003). Bulk chemical composition data of technical-grade  $\text{KMnO}_4$  and  $\text{NaHCO}_3$  were not collected before the column testing but will be tested prior to field injection. Since other Appendix IV constituents in the aquifer soils were very low (Anchor QEA 2023; Table 3), only dissolved concentrations of arsenic, cobalt, iron, and manganese were analyzed.

The treated soils were packed into 22-centimeter (cm)-long, 4.2-cm-diameter polypropylene columns. The Site groundwater containing the COIs was pumped in an upflow direction through the columns at a constant flow rate of approximately 0.8 milliliter (mL) per minute for 77 to 82 pore volumes (PVs) using a peristaltic pump with a multichannel pump head. Flow rates were regularly checked and adjusted as needed to maintain a constant flow rate. During the column tests, the average flow rate in the effluent samples was 0.72 mL per minute. Table 4 provides a summary of the column test operating conditions. The laboratory column apparatus is shown in Figure 2, and a detailed schematic is provided in Figure 3.

The laboratory column tests were operated at a higher linear velocity (74.8 cm per day) than the expected average groundwater flow conditions in the vicinity of the Site, which is 31.4 cm per day (Appendix D of SCS 2023). As a result, the hydraulic residence time in the columns was shorter than the hydraulic residence time expected in the field, where longer residence times may be expected to result in greater extent of removal. The removal efficiency and capacity measured in the columns, therefore, likely provide conservative estimates of treatment performance in the field.

Column influent and effluent solutions were sampled periodically (two to three times a day for the duration of the column tests), and water quality parameters including pH, ORP, and SC were measured at the EGL. The cumulative flow volume was also recorded at the time of sampling and used to calculate the total number of PVs treated. Column influent and effluent samples were filtered using 0.45-micron polyethersulfone syringe filters and preserved with nitric acid. The samples were submitted to ALS Environmental for analysis of dissolved arsenic and cobalt and treatment reagent constituents, including manganese.

After treatment-phase column studies were complete, Site background groundwater (GC-AP-MW-23) was pumped through the columns to determine the stability/reversibility of treatment. The column flushing phase was run at a constant flow rate for approximately 24 PVs, and column influents and effluents were sampled at intervals. Samples were analyzed for dissolved COIs and constituents of the treatment reagents used (e.g., manganese). These samples were not analyzed for other Appendix III/IV constituents because they were not detected or present at very low levels in Site soils used for the column tests (Anchor QEA 2023; Table 3).

Following completion of the column tests, the treated aquifer soils were recovered from the columns and subjected to a five-step selective sequential extraction (SSE) procedure. In SSE, the treated aquifer soils are extracted by a series of increasingly chemically aggressive solutions that target different binding forms, and the COIs released by each extraction step are quantified. The results are used to determine the mechanisms and strength of binding and inform long-term stability (or reversibility) of the treatment.

## 3.2 Treatment-Phase Column Test Results

Column treatment-phase test results are included in Table 5 and Appendix A. Influent and effluent concentrations of the COIs for the two Site groundwater samples are also shown in Figures 4 and 5. The cumulative COI mass uptake of the two treated soils in the columns is also plotted against the cumulative COI mass loading in Figures 6 and 7 for arsenic and cobalt, respectively.

Arsenic concentrations in the GC-AP-MW-1 influent reservoir were not stable and decreased over time, despite spiking of dissolved arsenic at 2,000 µg/L (Figure 4). Although the influent reservoirs were purged with nitrogen (N<sub>2</sub>) and kept in sealed Mylar bags with oxygen-absorbing packets during the column tests, orange-brown iron oxide precipitates were observed to form inside the influent reservoir over time, likely due to ongoing slow iron oxidation under anaerobic conditions. Dissolved arsenic concentrations in the GC-AP-MW-1 influent reservoir were above the GWPS for the first approximately 70 PVs of column flow (Figure 4). The effluent solution from the GC-AP-MW-1 KMnO<sub>4</sub> + NaHCO<sub>3</sub>-treated soil column contained arsenic concentrations below the GWPS for the duration of the study. The KMnO<sub>4</sub> + NaHCO<sub>3</sub>-treated soil column achieved >99% removal of the influent mass of arsenic through the duration of the column study (approximately 77 PVs) for GC-AP-MW-1. The arsenic uptake capacity of the treated soil was not exhausted and is >5.8 milligrams per kilogram (mg/kg) (Figure 6).

Cobalt concentrations in the GC-AP-MW-1 groundwater reservoir were greater than approximately 230 µg/L for the duration of the column study (Figure 4). In this KMnO<sub>4</sub> + NaHCO<sub>3</sub>-treated soil column, effluent concentrations of cobalt remained below the GWPS for approximately 3 PVs before cobalt breakthrough occurred. Cobalt concentrations in the effluent were equivalent to those in the influent after approximately 10 PVs. The GC-AP-MW-1 KMnO<sub>4</sub> + NaHCO<sub>3</sub>-treated soil column achieved <10% removal of the influent mass of cobalt through the duration of the study (approximately 77 PVs; Figures 4 and 7).

The GC-AP-MW-44H groundwater reservoir maintained influent cobalt concentrations above approximately 240 µg/L for the duration of the column study (Figure 5). This KMnO<sub>4</sub> + NaHCO<sub>3</sub>-treated soil column maintained cobalt concentrations in the effluent below the GWPS for approximately 15 PVs and achieved >81% removal of the influent mass of cobalt through the duration of the study (approximately 80 PVs; Figures 5 and 7). The cobalt uptake capacity of the soil was not exhausted and is >2.9 mg/kg (Figure 7). The KMnO<sub>4</sub> + NaHCO<sub>3</sub> treatment was more effective in removing cobalt from GC-AP-MW-44H groundwater than from GC-AP-MW-1 groundwater because GC-AP-MW-44H had a higher influent pH (approximately 6.4) than GC-AP-MW-1 (approximately 5.8). Likewise, the effluent pH was 5.2 for GC-AP-MW-1 and 6.8 for GC-AP-MW-44H at the end of the treatment phase of the column tests. Cobalt removal by iron and manganese oxides is sensitive to pH and decreases significantly below a pH of 6 to 7.

Overall, the  $\text{KMnO}_4 + \text{NaHCO}_3$  treatment was effective for removed of arsenic from Site groundwater. However, cobalt removal depended on groundwater pH, being effective for weakly acidic groundwater (pH 6.4) and not effective for groundwater with pH <6.

## 4 COI Sequestration and Stability of Treatment

Mechanisms and stability of treatment were assessed by flushing the columns with background groundwater and performing SSE on solids recovered from the columns at the end of the tests.

### 4.1 Flushing-Phase Column Tests to Assess Treatment Stability

Following completion of the treatment phase of the column tests using impacted groundwater, the column influents were switched to background groundwater (GC-AP-MW-23) to assess the reversibility of the COI removal by the treated soils. Background groundwater was run through the columns for up to approximately 24 PVs. During this flushing phase of the column tests, the COI concentrations in the effluents were lower than the effluents at the end of the treatment phase and decreased over time. Arsenic remained below 1 µg/L in the GC-AP-MW-1 column effluent (Table 6), demonstrating high stability of arsenic removed by the treated soil. Cobalt, however, was not effectively removed from GC-AP-MW-1.

Cobalt was detected above the GWPS at the beginning of the flushing phase in the GC-AP-MW-44H column but accounted for a small overall quantity of cobalt: approximately 39 micrograms (µg) of cobalt was flushed from the column (total load of 1480 µg). The low percentage of cobalt (<3%) re-released from the GC-AP-MW-44H column demonstrates the stability of cobalt removed by  $\text{KMnO}_4 + \text{NaHCO}_3$  treatment. An additional consideration is that the pH of the effluent increased from mildly acidic to neutral levels over the duration of the flushing phase, indicating a neutral pH will promote cobalt stabilization. Column test results for the flushing phase are included in Table 6 and Appendix A.

### 4.2 SSE on Post-Column Aquifer Soils and Untreated Soils

SSE quantifies the distribution of the sequestered COIs among different solid phases in the treated and COI-loaded aquifer soils. SSE results provide insights into the COI removal mechanisms, potential for remobilization of COIs, and long-term stability of the sequestered COIs. Specifically, SSE categorizes the target constituents into five operationally defined fractions, F1 through F5, which require increasingly aggressive chemical reagents to extract. The chemical extractions and what they represent are as follows:

Fraction No.	Fraction Name	Extraction Fluid	Targeted Phases
F1	Soluble	1 M magnesium chloride adjusted to pH 7	Dissolved and weakly sorbed
F2	Exchangeable	1 M monosodium phosphate at pH 5	Strongly sorbed, e.g., on clay minerals and oxides
F3	Reducible	0.1 M hydroxylamine/hydrochloric acid adjusted to pH 2 with nitric acid	Poorly crystalline metal oxides such as iron and manganese oxides

<b>Fraction No.</b>	<b>Fraction Name</b>	<b>Extraction Fluid</b>	<b>Targeted Phases</b>
F4	Strong acid/oxidizable	16 M nitric acid	Crystalline oxide and crystalline sulfide minerals
F5	Residual	Digestion by USEPA Method 3050B	Silicate and other recalcitrant phases in the aquifer soil matrix

SSE was performed in accordance with the EGL standard operating procedure modified from Tessier et al. (1979). First, the bottom 6 cm of treated soil in the column was recovered and thoroughly homogenized. Approximately 1 gram (dry weight) of the recovered column media was weighed into a 50-mL centrifuge tube and extracted with the solutions in the sequence described above. SSE was also performed on aliquots of GC-AP-PT-1 and GC-AP-PT-5 untreated soil.

The SSE results are summarized in Figures 8 through 11 and Table 7; the analytical data are included in Appendix A. SSE results indicate arsenic in the GC-AP-MW-1 column solids was sequestered predominantly in F2 and F4, with approximately 99% of the arsenic sequestered in F2 through F5 (Figure 8). These fractions include COIs strongly adsorbed to and incorporated in manganese and iron oxides, as well as naturally occurring COIs associated with silicate or other recalcitrant phases in the aquifer soil matrix (Figures 10 and 11). Iron oxide concentrations increased in F4 due to high groundwater iron content and treatment (Figure 10), and arsenic was found predominantly in F4 (Figure 8), showing that crystalline iron oxides were responsible for arsenic removal from GC-AP-MW-1 groundwater. In contrast, little manganese oxide formed in the GC-AP-MW-1 treated soil (Figure 11), likely due to the low pH. Cobalt was not accumulated in GC-AP-MW-1 column solids, which was expected based on the low mass uptake of cobalt during the treatment phase of the column tests.

In GC-AP-MW-44H column solids, cobalt was sequestered primarily in F3 at a higher proportion than in the untreated soils, with approximately 95% of the cobalt being in the F2 through F5 fractions, suggesting cobalt is strongly adsorbed to and incorporated in manganese and iron oxides (Figures 9, 10, and 11). The manganese oxide concentration in F3 increased by an order of magnitude between untreated and treated soils (Figure 11), and cobalt was found predominantly in F3 (Figure 9), indicating manganese oxides are responsible for cobalt removal from GC-AP-MW-44H groundwater.

Overall, the association of cobalt with manganese oxides and arsenic with iron oxides indicates COIs are strongly sequestered in relatively stable phases in the treated soils. The SSE data also corroborate the column test flushing-phase results, which demonstrate the irreversibility of arsenic and cobalt removal in the GC-AP-MW-1 and GC-AP-MW-44H treated soils, respectively.

## 5 Conclusions and Recommendations

Supplemental column tests were performed to evaluate the effectiveness of a single-solution reagent mix,  $\text{KMnO}_4 + \text{NaHCO}_3$ , in removing the COIs (i.e., arsenic and/or cobalt) from Site groundwater. Performance criteria evaluated included the COI removal efficiency, treatment capacity, stability of the sequestered COIs, and potential for unintended consequences such as release of Appendix III/IV constituents from the aquifer matrix. Major conclusions of the supplemental treatability study are as follows:

- The  $\text{KMnO}_4 + \text{NaHCO}_3$  reagent mix performed well for arsenic removal in GC-AP-MW-1 and cobalt removal in GC-AP-MW-44H groundwater, respectively.
- In the column tests, the GWPS was achieved for arsenic in GC-AP-MW-1 and for cobalt in the higher pH (6.4) groundwater (GC-AP-MW-44H) using the  $\text{KMnO}_4 + \text{NaHCO}_3$  treatment. The column test results showed >99% and >81% removal of arsenic and cobalt mass, respectively, for  $\geq 15$  PVs.
- The GWPS was not achieved for cobalt in GC-AP-MW-1 groundwater, which had a lower pH (5.8), underscoring the importance of achieving a circumneutral pH for effective cobalt removal.
- After the treatment phase of the column studies, Site background groundwater was pumped through the columns to determine the reversibility of treatment. The flushing-phase concentrations of arsenic were below  $1 \mu\text{g/L}$ , indicating stability of treatment for GC-AP-MW-1 groundwater. The mass of cobalt removed from the GC-AP-MW-44H column during the flushing phase was low ( $<40 \mu\text{g}$ ), also indicating stability of treatment.
- Following completion of the column tests, the column media (aquifer soils) were recovered to evaluate the long-term stability of sequestered COIs to remobilization using a five-step SSE procedure. SSE results indicate cobalt and arsenic were associated with and bound to manganese and iron oxide phases, respectively, formed by the treatment and present in the native soils.

Recommendations based on the initial and supplemental treatability studies are as follows:

- Single-solution injection of  $\text{KMnO}_4 + \text{NaHCO}_3$  treatment is currently recommended for pilot testing at GC-AP-MW-44H. If the pilot testing location is at GC-AP-PZ-4 instead of GC-AP-MW-44H, a batch test with the  $\text{KMnO}_4 + \text{NaHCO}_3$  treatment should be performed to confirm treatment performance prior to the pilot test.
- At GC-AP-MW-1, a single-solution reagent mix ( $\text{KMnO}_4 + \text{NaHCO}_3$ ) is likely to be successful for arsenic removal but not cobalt removal due to the acidic pH of the groundwater at this location. Therefore, the two-solution Reagent Mix C ( $\text{FeCl}_3 + \text{MnCl}_2 + \text{MgCl}_2$  solution, followed by  $\text{NaAlO}_2 + \text{KMnO}_4$  solution +  $\text{NaOH}$  for pH adjustment to 9.5) is recommended for pilot testing at GC-AP-MW-1.

- At GC-AP-MW-5, the two-solution Reagent Mix C tested in the 2022 initial treatability studies is likely to be successful for the simultaneous removal of arsenic and lithium and is recommended for pilot testing at this location.
- Following selection of pilot locations and prior to implementation of field pilot tests, groundwater chemistry data should be reviewed, especially if a pilot test location is at a different location than that of the wells tested in this laboratory treatability study. If significant differences in groundwater chemistry are identified, confirmatory batch testing is recommended to confirm treatment performance and, if necessary, adjust the proposed injection reagent mix.

Total organic carbon	mg/L	2.1	--	1.05 J	--	1.0 U	--
Turbidity (field)	NTU	4.37	--	7.35	--	1.89	--

Notes:

Samples were field filtered with a 0.45-micron filter at the time of collection and filtered again prior to analysis for dissolved constituents.

Samples were collected in the field on May 16, 2023, then sent directly to the analytical laboratories (the APC Environmental Laboratory and Pace Analytical Services, LLC) and to EGL for supplemental testing. EGL submitted subsamples to ALS Environmental for additional initial characterization on May 26, 2023 (Sample Delivery Group No. K2306772).

--: not measured

µg/L: microgram per liter

µS/cm: microsiemen per centimeter

EGL: Anchor QEA Environmental Geochemistry Laboratory

J: indicates the result is an estimated value

mg/L: milligram per liter

mV: millivolt

NTU: Nephelometric Turbidity Unit

pCi/L: picocurie per liter

SU: standard unit

U: Indicates the compound was analyzed for but not detected. Value is set to method detection limit.

**Table 2**  
**Pairs of Groundwater and Aquifer Soils Used in the Supplemental Treatability Study**

<b>Groundwater ID</b>	<b>Soil Sample ID</b>	<b>Depth Interval (ft bgs)</b>	<b>COI(s) in Groundwater</b>
GC-AP-MW-1	GC-AP-PT-1	11.0–25.0	Arsenic and cobalt
GC-AP-MW-44H	GC-AP-PT-5	12.0–22.0	Cobalt

Notes:

COI: constituent of interest

ft bgs: foot below ground surface

**Table 3**  
**Column Test Setup**

<b>Column No.</b>	<b>Reagent Mix</b>	<b>Groundwater ID</b>	<b>Aquifer Soil ID (depth; feet)</b>	<b>COI(s)</b>	<b>Soil Added (dry weight; grams)</b>	<b>Reagent Mix Added (dry weight; grams)</b>
1	KMnO <sub>4</sub> + NaHCO <sub>3</sub>	GC-AP-MW-1	GC-AP-PT-1 (11.0–25.0)	As and Co	543	0.377
2	KMnO <sub>4</sub> + NaHCO <sub>3</sub>	GC-AP-MW-44H	GC-AP-PT-5 (12.0–22.0)	Co	510	0.499

Notes:

As: arsenic

Co: cobalt

COI: constituent of interest

KMnO<sub>4</sub> + NaHCO<sub>3</sub>: potassium permanganate with sodium bicarbonate

**Table 4**  
**Column Test Operating Conditions**

Parameter	Value	Unit
Column media depth	22.0	cm
Column inner diameter	4.2	cm
Flow rate	0.71–0.73	mL/min
Porosity	0.29–0.30	--
Hydraulic residence time <sup>1</sup>	2.01–2.14	hours
Superficial velocity <sup>1</sup>	73.9–75.6	cm/day
Test duration	7 (+3 flushing phase)	days
Pore volumes treated	77.0–82.0	--
Pore volumes flushed	23.8–24.5	--

Notes:

1. Values are calculated for each column using the measured porosity and average flow rate for that column over the column test duration.

--: not applicable

cm: centimeter

cm/day: centimeter per day

mL/min: milliliter per minute

**Table 5**  
**Column Treatment-Phase Test Results**

Notes:

- 1. Flow rate was measured in effluent samples only.
- a. GC-COL-MW-44H-INF-4 and GC-COL-MW-1-INF-4 were switched when submitting to the analytical laboratory, as were GC-COL-MW-44H-INF-10 and GC-COL-MW-1-INF-10.
- b. Values are not accurate due to equipment malfunction in SC sampling.
- : not applicable
- DNM: did not measure
- µg/L: microgram per liter
- µS/cm: microsiemen per centimeter
- J: indicates the result is an estimated value
- mg/L: milligram per liter
- mL/min: milliliter per minute
- mV: millivolt
- ORP: oxidation reduction potential
- SC: specific conductivity

Notes:

1. Groundwater collected from GC-AP-MW-1 was paired with aquifer soil collected from GC-AP-PT-1.
2. Groundwater collected from GC-AP-MW-44H was paired with aquifer soil collected from GC-AP-PT-5.

All results are reported on a dry weight basis.

Dup: duplicate

F1: water soluble, weakly sorbed (extracted by 1 M magnesium chloride to pH 7)

F2: exchangeable, strongly sorbed, e.g., on clay minerals and oxides (extracted by 1 M monosodium phosphate at pH 5)

F3: reducible, e.g., poorly crystalline metal oxides such as iron and manganese oxides (extracted by 0.1 M hydroxylamine/hydrochloric acid adjusted to pH 2 with nitric acid)

F4: oxidizable, e.g., crystalline oxide and crystalline sulfide minerals (extracted by 16 M nitric acid)

F5: residual, e.g., silicate and other recalcitrant phases in the aquifer soil matrix (prepared by U.S. Environmental Protection Agency Method 3050B)

J: indicates the result is an estimated value

KMnO<sub>4</sub> + NaHCO<sub>3</sub>: potassium permanganate with sodium bicarbonate

M: molar

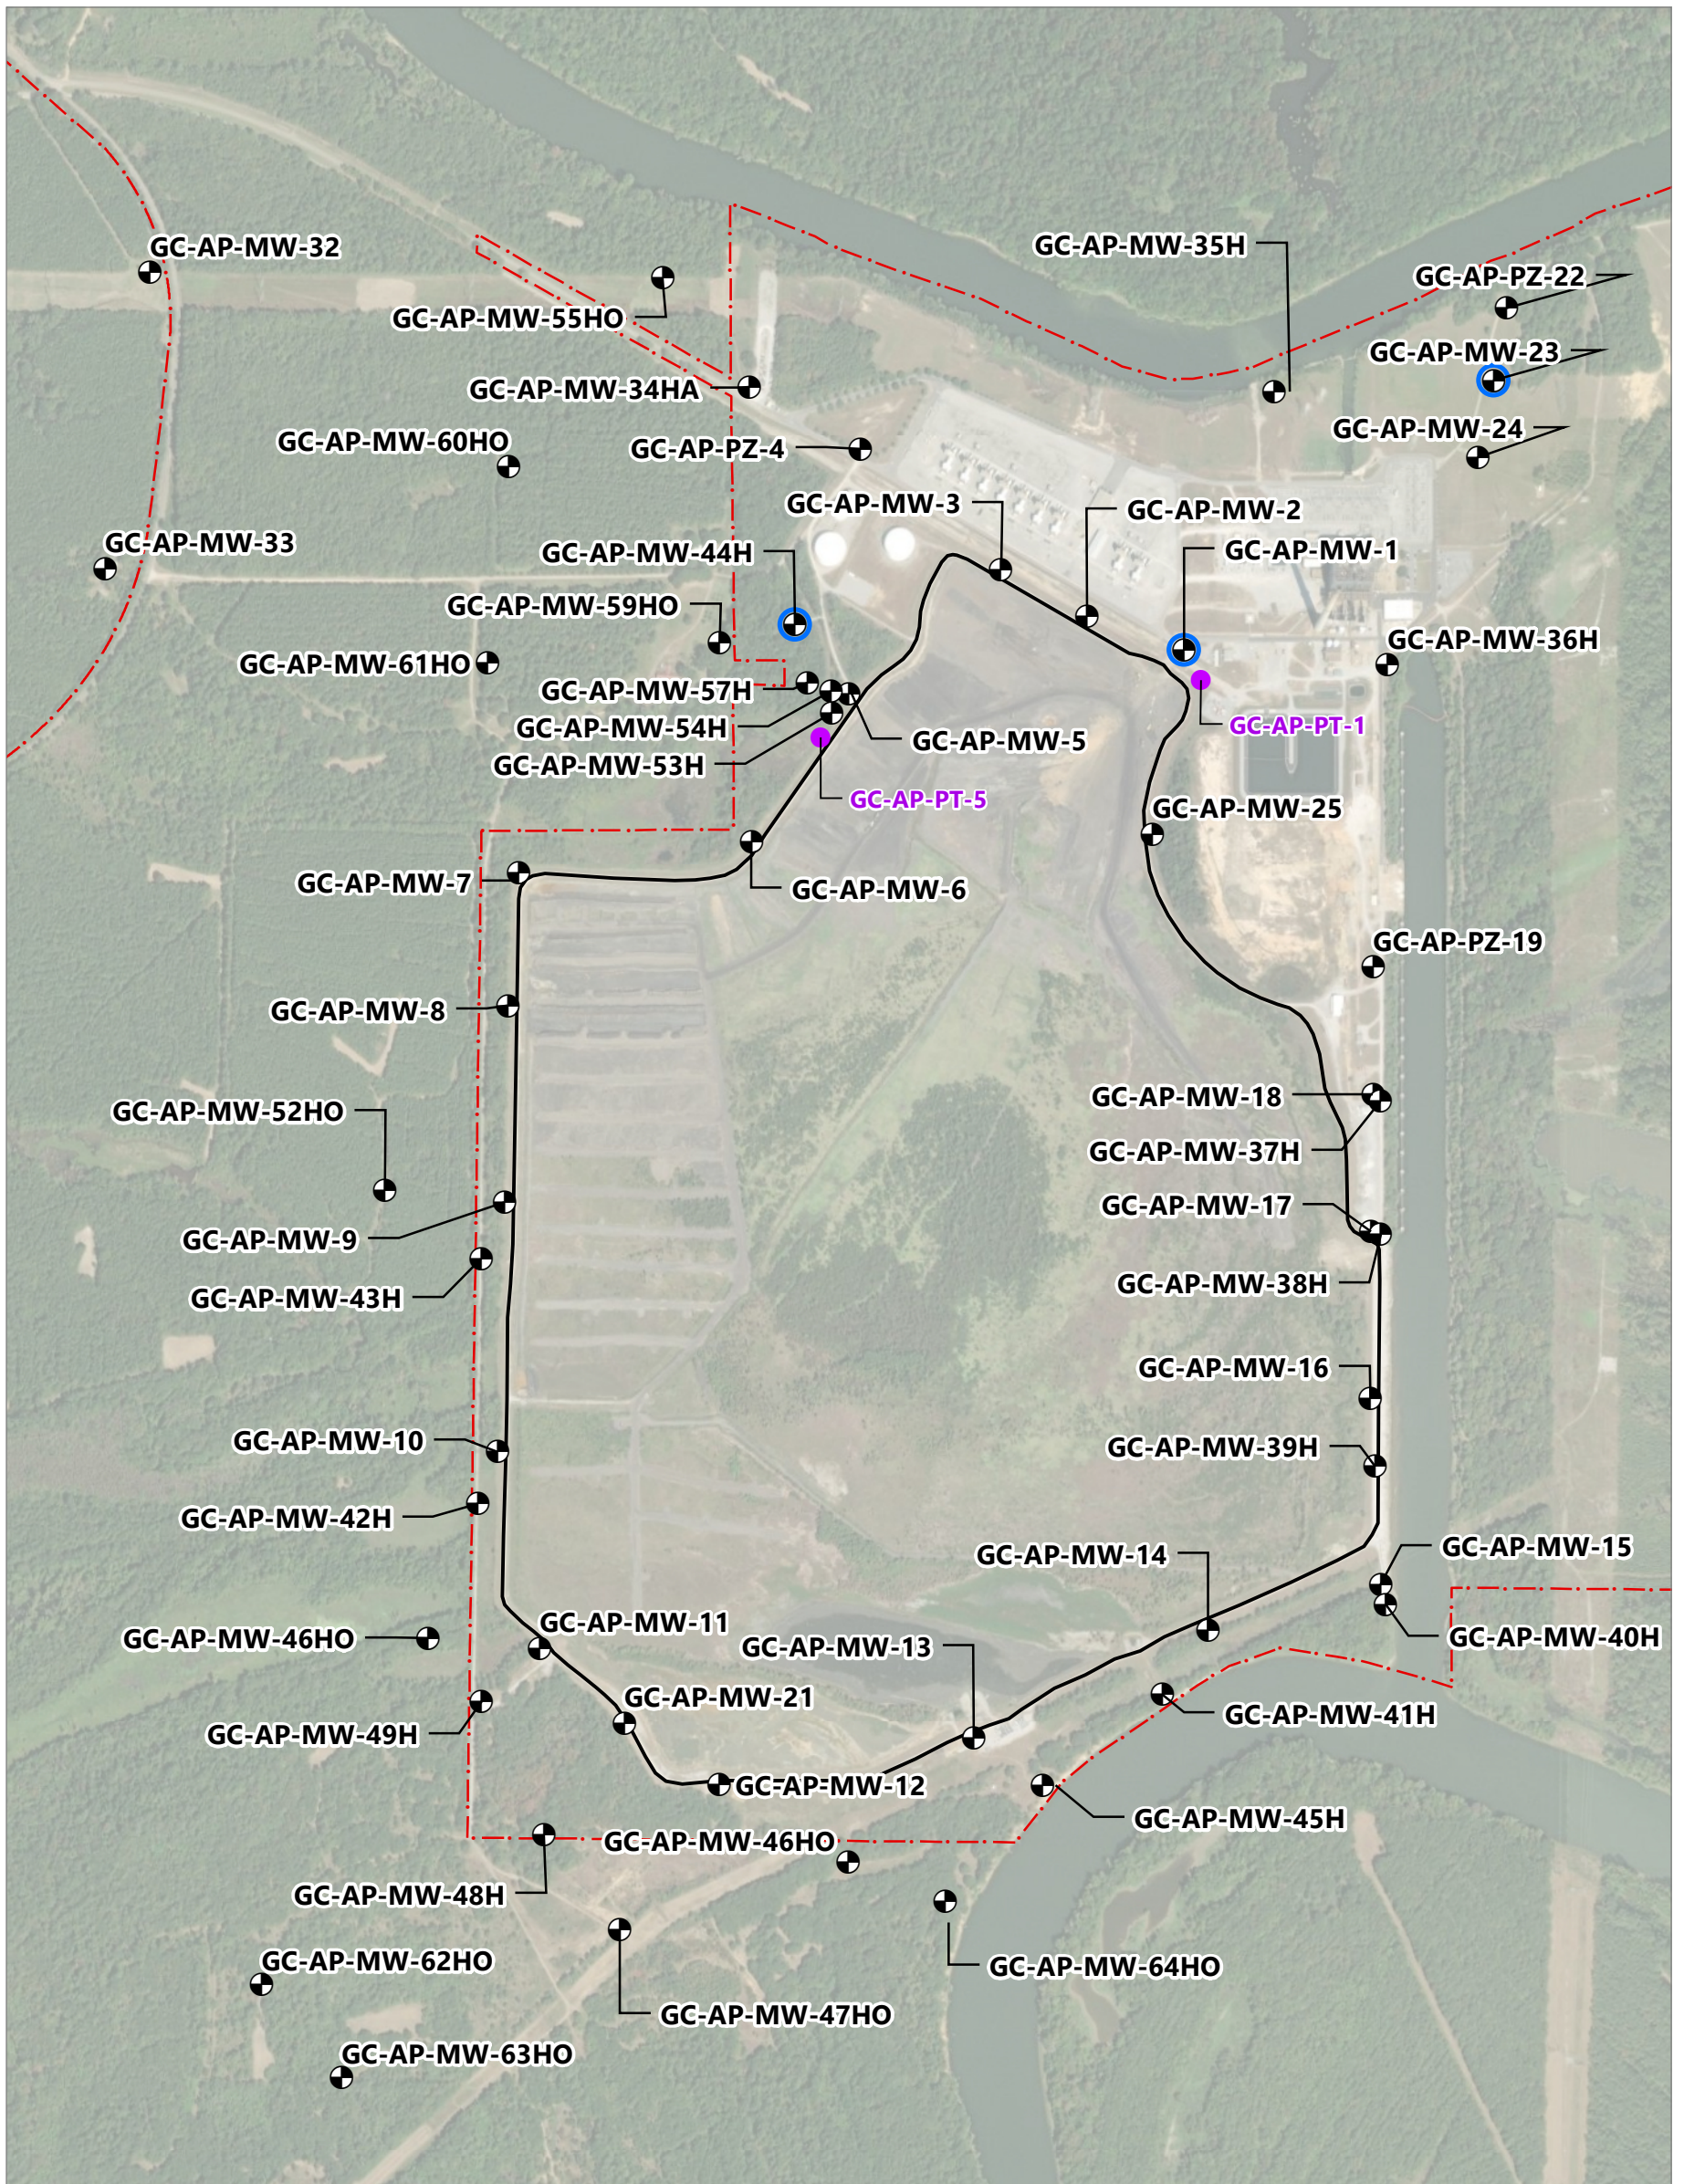

mg/kg: milligram per kilogram

SSE: selective sequential extraction

U: indicates the compound was analyzed for but not detected (Value is set to instrument detection limit.)

**Laboratory Results for: Greene County Treatability**

Dear Masa,

Enclosed are the results of the sample(s) submitted to our laboratory June 14, 2023  
For your reference, these analyses have been assigned our service request number **K2306772**.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at [www.alsglobal.com](http://www.alsglobal.com). All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at [Mark.Harris@alsglobal.com](mailto:Mark.Harris@alsglobal.com).

Respectfully submitted,

**ALS Group USA, Corp. dba ALS Environmental**

Mark Harris

**Client:** Anchor QEA, LLC  
**Project:** Greene County Treatability  
**Sample Matrix:** Water

**Service Request:** K2306772  
**Date Received:** 06/14/2023

**CASE NARRATIVE**

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

**Sample Receipt:**

Four water samples were received for analysis at ALS Environmental on 06/14/2023. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

**Metals:**

No significant anomalies were noted with this analysis.

Approved by \_\_\_\_\_

Date 06/21/2023

**SAMPLE DETECTION SUMMARY**

This form includes only detections above the reporting levels. For a full listing of sample results, continue to the Sample Results section of this Report.

### **Inorganic Data Qualifiers**

- \* The result is an outlier. See case narrative.
- # The control limit criteria is not applicable.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- E The result is an estimate amount because the value exceeded the instrument calibration range.
- J The result is an estimated value.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.
- H The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

### **Metals Data Qualifiers**

- # The control limit criteria is not applicable.
- J The result is an estimated value.
- E The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
- M The duplicate injection precision was not met.
- N The Matrix Spike sample recovery is not within control limits. See case narrative.
- S The reported value was determined by the Method of Standard Additions (MSA).
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- W The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.  
  - i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- + The correlation coefficient for the MSA is less than 0.995.
- Q See case narrative. One or more quality control criteria was outside the limits.

### **Organic Data Qualifiers**

- \* The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- A A tentatively identified compound, a suspected aldol-condensation product.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- C The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
- D The reported result is from a dilution.
- E The result is an estimated value.
- J The result is an estimated value.
- N The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
- P The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- i The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.

### **Additional Petroleum Hydrocarbon Specific Qualifiers**

- F The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
- L The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
- H The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
- O The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
- Y The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
- Z The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at [www.ALSGlobal.com](http://www.ALSGlobal.com) or at the accreditation bodies web site.

Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/analyte is offered by that state.

## Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LOD	Limit of Detection
LOQ	Limit of Quantitation
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

**Laboratory Results for: Greene County-2023 & 2024**

Dear Masa,

Enclosed are the results of the sample(s) submitted to our laboratory June 27, 2023  
For your reference, these analyses have been assigned our service request number **K2307317**.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at [www.alsglobal.com](http://www.alsglobal.com). All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at [Mark.Harris@alsglobal.com](mailto:Mark.Harris@alsglobal.com).

Respectfully submitted,

**ALS Group USA, Corp. dba ALS Environmental**

Mark Harris

**Client:** Anchor QEA, LLC  
**Project:** Greene County-2023 & 2024  
**Sample Matrix:** Water

**Service Request:** K2307317  
**Date Received:** 06/27/2023

**CASE NARRATIVE**

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

**Sample Receipt:**

Four water samples were received for analysis at ALS Environmental on 06/27/2023. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

**Metals:**

No significant anomalies were noted with this analysis.

*Noel D. O'Connell*

Received: 6/27/23 Opened: 6/27/23 By: VIM Unloaded: 6/27/23 By: VIM

- 1. Samples were received via? **USPS** *Fed Ex* *UPS* *DHL* *PDX* Courier *Hand Delivered*
- 2. Samples were received in: (circle) Cooler *Box* *Envelope* *Other* NA
- 3. Were custody seals on coolers? *NA* *Y* N If yes, how many and where? \_\_\_\_\_  
If present, were custody seals intact? *Y* *N* If present, were they signed and dated? *Y* *N*

Temp Blank	Sample Temp	IR Gun	Cooler #/COC ID / NA	Out of temp indicate with "X"	PM Notified If out of temp	Tracking Number NA	Filed
<u>3.8</u>		<u>IR02</u>					

- 4. Was a Temperature Blank present in cooler? *NA* Y *N* If yes, notate the temperature in the appropriate column above:  
If no, take the temperature of a representative sample bottle contained within the cooler; notate in the column "Sample Temp":
- 5. Were samples received within the method specified temperature ranges? *NA* Y *N*  
If no, were they received on ice and same day as collected? If not, notate the cooler # above and notify the PM. NA Y *N*
- If applicable, tissue samples were received: *Frozen* *Partially Thawed* *Thawed*
- 6. Packing material: *Inserts* Baggies *Bubble Wrap* *Gel Packs* Wet Ice *Dry Ice* *Sleeves* \_\_\_\_\_
- 7. Were custody papers properly filled out (ink, signed, etc.)? *NA* Y *N*
- 8. Were samples received in good condition (unbroken) *NA* Y *N*
- 9. Were all sample labels complete (ie, analysis, preservation, etc.)? *NA* Y *N*
- 10. Did all sample labels and tags agree with custody papers? *NA* Y *N*
- 11. Were appropriate bottles/containers and volumes received for the tests indicated? *NA* Y *N*
- 12. Were the pH-preserved bottles (*see SMO GEN SOP*) received at the appropriate pH? *Indicate in the table below* NA *Y* *N*
- 13. Were VOA vials received without headspace? *Indicate in the table below.* NA *Y* *N*
- 14. Was C12/Res negative? NA *Y* *N*
- 15. Were samples received within the method specified time limit? If not, notate the error below and notify the PM NA *Y* *N*
- 16. Were 100ml sterile microbiology bottles filled exactly to the 100ml mark? NA *Y* *N* Underfilled Overfilled

Sample ID on Bottle	Sample ID on COC	Identified by:

Sample ID	Bottle Count	Bottle Type	Head-space	Broke	pH	Reagent	Volume added	Reagent Lot Number	Initials	Time

Notes, Discrepancies, Resolutions: Dicrit pH due to limited volume

## Miscellaneous Forms

**ALS Environmental—Kelso Laboratory**  
1317 South 13th Avenue, Kelso, WA 98626  
Phone (360) 577-7222 Fax (360) 425-9096  
[www.alsglobal.com](http://www.alsglobal.com)

### **Inorganic Data Qualifiers**

- \* The result is an outlier. See case narrative.
- # The control limit criteria is not applicable.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- E The result is an estimate amount because the value exceeded the instrument calibration range.
- J The result is an estimated value.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.
- H The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

### **Metals Data Qualifiers**

- # The control limit criteria is not applicable.
- J The result is an estimated value.
- E The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
- M The duplicate injection precision was not met.
- N The Matrix Spike sample recovery is not within control limits. See case narrative.
- S The reported value was determined by the Method of Standard Additions (MSA).
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- W The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.  
  - i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- + The correlation coefficient for the MSA is less than 0.995.
- Q See case narrative. One or more quality control criteria was outside the limits.

### **Organic Data Qualifiers**

- \* The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- A A tentatively identified compound, a suspected aldol-condensation product.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- C The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
- D The reported result is from a dilution.
- E The result is an estimated value.
- J The result is an estimated value.
- N The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
- P The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.  
  - i The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.

### **Additional Petroleum Hydrocarbon Specific Qualifiers**

- F The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
- L The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
- H The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
- O The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
- Y The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
- Z The chromatographic fingerprint does not resemble a petroleum product.

**Laboratory Results for: Greene County-2023 & 2024**

Dear Masa,

Enclosed are the results of the sample(s) submitted to our laboratory June 27, 2023  
For your reference, these analyses have been assigned our service request number **K2307318**.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at [www.alsglobal.com](http://www.alsglobal.com). All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at [Mark.Harris@alsglobal.com](mailto:Mark.Harris@alsglobal.com).

Respectfully submitted,

**ALS Group USA, Corp. dba ALS Environmental**

Mark Harris  
Project Manager

**Service Request:** K2307318  
**Date Received:** 06/27/2023

**CASE NARRATIVE**

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

**Sample Receipt:**

Four water samples were received for analysis at ALS Environmental on 06/27/2023. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

**Metals:**

No significant anomalies were noted with this analysis.

Approved by \_\_\_\_\_

Date 07/05/2023

### SAMPLE DETECTION SUMMARY

### **Inorganic Data Qualifiers**

- \* The result is an outlier. See case narrative.
- # The control limit criteria is not applicable.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- E The result is an estimate amount because the value exceeded the instrument calibration range.
- J The result is an estimated value.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.
- H The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

### **Metals Data Qualifiers**

- # The control limit criteria is not applicable.
- J The result is an estimated value.
- E The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
- M The duplicate injection precision was not met.
- N The Matrix Spike sample recovery is not within control limits. See case narrative.
- S The reported value was determined by the Method of Standard Additions (MSA).
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- W The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.  
  - i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- + The correlation coefficient for the MSA is less than 0.995.
- Q See case narrative. One or more quality control criteria was outside the limits.

### **Organic Data Qualifiers**

- \* The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- A A tentatively identified compound, a suspected aldol-condensation product.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- C The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
- D The reported result is from a dilution.
- E The result is an estimated value.
- J The result is an estimated value.
- N The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
- P The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.  
  - i The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.

### **Additional Petroleum Hydrocarbon Specific Qualifiers**

- F The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
- L The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
- H The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
- O The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
- Y The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
- Z The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at [www.ALSGlobal.com](http://www.ALSGlobal.com) or at the accreditation bodies web site.

Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/analyte is offered by that state.

## Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LOD	Limit of Detection
LOQ	Limit of Quantitation
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

**Laboratory Results for: Greene County-2023 & 2024**

Dear Masa,

Enclosed are the results of the sample(s) submitted to our laboratory June 30, 2023  
For your reference, these analyses have been assigned our service request number **K2307482**.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at [www.alsglobal.com](http://www.alsglobal.com). All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at [Mark.Harris@alsglobal.com](mailto:Mark.Harris@alsglobal.com).

Respectfully submitted,

**ALS Group USA, Corp. dba ALS Environmental**

Mark Harris

### CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

#### Sample Receipt:

Twelve water samples were received for analysis at ALS Environmental on 06/30/2023. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

#### Metals:

No significant anomalies were noted with this analysis.

Approved by 

Date 07/10/2023

### SAMPLE DETECTION SUMMARY

This form includes only detections above the reporting levels. For a full listing of sample results, continue to the Sample Results section of this Report.

### Cooler Receipt and Preservation Form

Client Ancher Service Request K23 07482  
Received: 6/30/23 Opened: 6/30/23 By: MP Unloaded: 6/30/23 By: MP

- 1. Samples were received via? USPS Fed Ex UPS DHL PDX Courier Hand Delivered
- 2. Samples were received in: (circle) Cooler Box Envelope Other NA
- 3. Were custody seals on coolers? NA Y N If yes, how many and where? \_\_\_\_\_  
If present, were custody seals intact? Y N If present, were they signed and dated? Y N

Temp Blank	Sample Temp	IR Gun	Cooler #/COC ID / NA	Out of temp indicate with "X"	PM Notified if out of temp	Tracking Number	NA	Filed
<u>5.8</u>		<u>1802</u>						

4. Was a Temperature Blank present in cooler? NA Y N If yes, notate the temperature in the appropriate column above:  
If no, take the temperature of a representative sample bottle contained within the cooler; notate in the column "Sample Temp":

5. Were samples received within the method specified temperature ranges? NA Y N  
If no, were they received on ice and same day as collected? If not, notate the cooler # above and notify the PM. NA Y N

If applicable, tissue samples were received: Frozen Partially Thawed Thawed

- 6. Packing material: Inserts Baggies Bubble Wrap Gel Packs Wet Ice Dry Ice Sleeves \_\_\_\_\_
- 7. Were custody papers properly filled out (ink, signed, etc.)? NA Y N
- 8. Were samples received in good condition (unbroken) NA Y N
- 9. Were all sample labels complete (ie, analysis, preservation, etc.)? NA Y N
- 10. Did all sample labels and tags agree with custody papers? NA Y N
- 11. Were appropriate bottles/containers and volumes received for the tests indicated? NA Y N
- 12. Were the pH-preserved bottles (see SMO GEN SOP) received at the appropriate pH? Indicate in the table below NA Y N
- 13. Were VOA vials received without headspace? Indicate in the table below. NA Y N
- 14. Was C12/Res negative? NA Y N
- 15. Were samples received within the method specified time limit? If not, notate the error below and notify the PM NA Y N
- 16. Were 100ml sterile microbiology bottles filled exactly to the 100ml mark? NA Y N Underfilled Overfilled

Sample ID on Bottle	Sample ID on COC	Identified by:

Sample ID	Bottle Count	Bottle Type	Head-space	Broke	pH	Reagent	Volume added	Reagent Lot Number	Initials	Time

Notes, Discrepancies, Resolutions: Did not Ph due to limited volume

## Miscellaneous Forms

**ALS Environmental—Kelso Laboratory**  
1317 South 13th Avenue, Kelso, WA 98626  
Phone (360) 577-7222 Fax (360) 425-9096  
[www.alsglobal.com](http://www.alsglobal.com)

### **Inorganic Data Qualifiers**

- \* The result is an outlier. See case narrative.
- # The control limit criteria is not applicable.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- E The result is an estimate amount because the value exceeded the instrument calibration range.
- J The result is an estimated value.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.
- H The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

### **Metals Data Qualifiers**

- # The control limit criteria is not applicable.
- J The result is an estimated value.
- E The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
- M The duplicate injection precision was not met.
- N The Matrix Spike sample recovery is not within control limits. See case narrative.
- S The reported value was determined by the Method of Standard Additions (MSA).
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- W The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.  
  - i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- + The correlation coefficient for the MSA is less than 0.995.
- Q See case narrative. One or more quality control criteria was outside the limits.

### **Organic Data Qualifiers**

- \* The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- A A tentatively identified compound, a suspected aldol-condensation product.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- C The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
- D The reported result is from a dilution.
- E The result is an estimated value.
- J The result is an estimated value.
- N The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
- P The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.  
  - i The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.

### **Additional Petroleum Hydrocarbon Specific Qualifiers**

- F The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
- L The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
- H The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
- O The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
- Y The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
- Z The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at [www.ALSGlobal.com](http://www.ALSGlobal.com) or at the accreditation bodies web site.

Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/analyte is offered by that state.

## Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LOD	Limit of Detection
LOQ	Limit of Quantitation
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Manganese	12900	12800	25	-425 #	70-130

Results flagged with an asterisk (\*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Matrix Spike and Matrix Spike Duplicate Data is presented for information purposes only. The matrix may or may not be relevant to samples reported in this report. The laboratory evaluates system performance based on the LCS and LCSD control limits.

Portland, OR 97219

**Laboratory Results for: Greene County-2023 & 2024**

Dear Masa,

Enclosed are the results of the sample(s) submitted to our laboratory June 30, 2023  
For your reference, these analyses have been assigned our service request number **K2307486**.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at [www.alsglobal.com](http://www.alsglobal.com). All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at [Mark.Harris@alsglobal.com](mailto:Mark.Harris@alsglobal.com).

Respectfully submitted,

**ALS Group USA, Corp. dba ALS Environmental**

Mark Harris

**Sample Matrix:** Water

**Service Request:** K2307486  
**Date Received:** 06/30/2023

**CASE NARRATIVE**

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

**Sample Receipt:**

Twenty water samples were received for analysis at ALS Environmental on 06/30/2023. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

**Metals:**

No significant anomalies were noted with this analysis.

### Cooler Receipt and Preservation Form

Client Anchor Service Request K23 01486  
Received: 6/30/23 Opened: 6/30/23 By: MP Unloaded: 6/30/23 By: MP

- 1. Samples were received via? USPS Fed Ex UPS DHL PDX Courier Hand Delivered
- 2. Samples were received in: (circle) Cooler Box Envelope Other NA
- 3. Were custody seals on coolers? NA Y N If yes, how many and where? \_\_\_\_\_  
If present, were custody seals intact? Y N If present, were they signed and dated? Y N

Temp Blank	Sample Temp	IR Gun	Cooler #/COC ID / NA	Out of temp indicate with "X"	PM Notified If out of temp	Tracking Number NA	Filed
<u>5.8</u>	<u>-</u>	<u>1802</u>					

- 4. Was a Temperature Blank present in cooler? NA Y N If yes, notate the temperature in the appropriate column above:  
If no, take the temperature of a representative sample bottle contained within the cooler; notate in the column "Sample Temp":
- 5. Were samples received within the method specified temperature ranges? NA Y N  
If no, were they received on ice and same day as collected? If not, notate the cooler # above and notify the PM. NA Y N
- If applicable, tissue samples were received: Frozen Partially Thawed Thawed
- 6. Packing material: Inserts Baggies Bubble Wrap Gel Packs Wet Ice Dry Ice Sleeves \_\_\_\_\_
- 7. Were custody papers properly filled out (ink, signed, etc.)? NA Y N
- 8. Were samples received in good condition (unbroken) NA Y N
- 9. Were all sample labels complete (ie, analysis, preservation, etc.)? NA Y N
- 10. Did all sample labels and tags agree with custody papers? NA Y N
- 11. Were appropriate bottles/containers and volumes received for the tests indicated? NA Y N
- 12. Were the pH-preserved bottles (see SMO GEN SOP) received at the appropriate pH? Indicate in the table below NA Y N
- 13. Were VOA vials received without headspace? Indicate in the table below. NA Y N
- 14. Was C12/Res negative? NA Y N
- 15. Were samples received within the method specified time limit? If not, notate the error below and notify the PM NA Y N
- 16. Were 100ml sterile microbiology bottles filled exactly to the 100ml mark? NA Y N Underfilled Overfilled

Sample ID on Bottle	Sample ID on COC	Identified by:

Sample ID	Bottle Count	Bottle Type	Head-space	Broke	pH	Reagent	Volume added	Reagent Lot Number	Initials	Time

Notes, Discrepancies, Resolutions: Did not Ph due to limited volume

## Miscellaneous Forms

**ALS Environmental—Kelso Laboratory**  
1317 South 13th Avenue, Kelso, WA 98626  
Phone (360) 577-7222 Fax (360) 425-9096  
[www.alsglobal.com](http://www.alsglobal.com)

### **Inorganic Data Qualifiers**

- \* The result is an outlier. See case narrative.
- # The control limit criteria is not applicable.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- E The result is an estimate amount because the value exceeded the instrument calibration range.
- J The result is an estimated value.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.
- H The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

### **Metals Data Qualifiers**

- # The control limit criteria is not applicable.
- J The result is an estimated value.
- E The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
- M The duplicate injection precision was not met.
- N The Matrix Spike sample recovery is not within control limits. See case narrative.
- S The reported value was determined by the Method of Standard Additions (MSA).
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- W The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.  
  - i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- + The correlation coefficient for the MSA is less than 0.995.
- Q See case narrative. One or more quality control criteria was outside the limits.

### **Organic Data Qualifiers**

- \* The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- A A tentatively identified compound, a suspected aldol-condensation product.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- C The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
- D The reported result is from a dilution.
- E The result is an estimated value.
- J The result is an estimated value.
- N The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
- P The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.  
  - i The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.

### **Additional Petroleum Hydrocarbon Specific Qualifiers**

- F The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
- L The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
- H The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
- O The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
- Y The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
- Z The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at [www.ALSGlobal.com](http://www.ALSGlobal.com) or at the accreditation bodies web site.

Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/analyte is offered by that state.

## Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LOD	Limit of Detection
LOQ	Limit of Quantitation
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

**Laboratory Results for: Greene County- 2023 & 2024**

Dear Masa,

Enclosed are the results of the sample(s) submitted to our laboratory July 03, 2023  
For your reference, these analyses have been assigned our service request number **K2307526**.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at [www.alsglobal.com](http://www.alsglobal.com). All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at [Mark.Harris@alsglobal.com](mailto:Mark.Harris@alsglobal.com).

Respectfully submitted,

**ALS Group USA, Corp. dba ALS Environmental**

**Project:** Greene County- 2023 & 2024  
**Sample Matrix:** Water

**Service Request:** K2307526  
**Date Received:** 07/03/2023

**CASE NARRATIVE**

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

**Sample Receipt:**

Twelve water samples were received for analysis at ALS Environmental on 07/03/2023. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

**Metals:**

No significant anomalies were noted with this analysis.

## Miscellaneous Forms

**ALS Environmental—Kelso Laboratory**  
1317 South 13th Avenue, Kelso, WA 98626  
Phone (360) 577-7222 Fax (360) 425-9096  
[www.alsglobal.com](http://www.alsglobal.com)

### **Inorganic Data Qualifiers**

- \* The result is an outlier. See case narrative.
- # The control limit criteria is not applicable.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- E The result is an estimate amount because the value exceeded the instrument calibration range.
- J The result is an estimated value.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.
- H The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

### **Metals Data Qualifiers**

- # The control limit criteria is not applicable.
- J The result is an estimated value.
- E The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
- M The duplicate injection precision was not met.
- N The Matrix Spike sample recovery is not within control limits. See case narrative.
- S The reported value was determined by the Method of Standard Additions (MSA).
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- W The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.  
  - i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- + The correlation coefficient for the MSA is less than 0.995.
- Q See case narrative. One or more quality control criteria was outside the limits.

### **Organic Data Qualifiers**

- \* The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- A A tentatively identified compound, a suspected aldol-condensation product.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- C The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
- D The reported result is from a dilution.
- E The result is an estimated value.
- J The result is an estimated value.
- N The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
- P The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.  
  - i The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.

### **Additional Petroleum Hydrocarbon Specific Qualifiers**

- F The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
- L The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
- H The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
- O The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
- Y The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
- Z The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at [www.ALSGlobal.com](http://www.ALSGlobal.com) or at the accreditation bodies web site.

Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/analyte is offered by that state.

## Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LOD	Limit of Detection
LOQ	Limit of Quantitation
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

**Laboratory Results for: Greene County- 2023 & 2024**

Dear Masa,

Enclosed are the results of the sample(s) submitted to our laboratory July 06, 2023  
For your reference, these analyses have been assigned our service request number **K2307606**.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at [www.alsglobal.com](http://www.alsglobal.com). All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at [Mark.Harris@alsglobal.com](mailto:Mark.Harris@alsglobal.com).

Respectfully submitted,

**ALS Group USA, Corp. dba ALS Environmental**

Mark Harris  
Project Manager

[www.alsglobal.com](http://www.alsglobal.com)

**Client:** Anchor QEA, LLC  
**Project:** Greene County- 2023 & 2024  
**Sample Matrix:** Water

**Service Request:** K2307606  
**Date Received:** 07/06/2023

**CASE NARRATIVE**

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

**Sample Receipt:**

Nine water samples were received for analysis at ALS Environmental on 07/06/2023. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

**Metals:**

No significant anomalies were noted with this analysis.

*Noel D. O'Connell*

[www.alsglobal.com](http://www.alsglobal.com)

### **Inorganic Data Qualifiers**

- \* The result is an outlier. See case narrative.
- # The control limit criteria is not applicable.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- E The result is an estimate amount because the value exceeded the instrument calibration range.
- J The result is an estimated value.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.
- H The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

### **Metals Data Qualifiers**

- # The control limit criteria is not applicable.
- J The result is an estimated value.
- E The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
- M The duplicate injection precision was not met.
- N The Matrix Spike sample recovery is not within control limits. See case narrative.
- S The reported value was determined by the Method of Standard Additions (MSA).
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- W The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.  
  - i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- + The correlation coefficient for the MSA is less than 0.995.
- Q See case narrative. One or more quality control criteria was outside the limits.

### **Organic Data Qualifiers**

- \* The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- A A tentatively identified compound, a suspected aldol-condensation product.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- C The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
- D The reported result is from a dilution.
- E The result is an estimated value.
- J The result is an estimated value.
- N The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
- P The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- i The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.

### **Additional Petroleum Hydrocarbon Specific Qualifiers**

- F The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
- L The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
- H The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
- O The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
- Y The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
- Z The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at [www.ALSGlobal.com](http://www.ALSGlobal.com) or at the accreditation bodies web site.

Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/analyte is offered by that state.

## Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LOD	Limit of Detection
LOQ	Limit of Quantitation
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

**Laboratory Results for: Greene County Treatability**

Dear Masa,

Enclosed are the results of the sample(s) submitted to our laboratory July 25, 2023  
For your reference, these analyses have been assigned our service request number **K2308335**.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at [www.alsglobal.com](http://www.alsglobal.com). All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at [Mark.Harris@alsglobal.com](mailto:Mark.Harris@alsglobal.com).

Respectfully submitted,

**ALS Group USA, Corp. dba ALS Environmental**

**Client:** Anchor QEA, LLC Greene  
**Project:** County Treatability Water  
**Sample Matrix:**

**Service Request:** K2308335  
**Date Received:** 07/25/2023

**CASE NARRATIVE**

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

**Sample Receipt:**

Nine water samples were received for analysis at ALS Environmental on 07/25/2023. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

**Metals:**

No significant anomalies were noted with this analysis.

[www.alsglobal.com](http://www.alsglobal.com)

### **Inorganic Data Qualifiers**

- \* The result is an outlier. See case narrative.
- # The control limit criteria is not applicable.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- E The result is an estimate amount because the value exceeded the instrument calibration range.
- J The result is an estimated value.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.
- H The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

### **Metals Data Qualifiers**

- # The control limit criteria is not applicable.
- J The result is an estimated value.
- E The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
- M The duplicate injection precision was not met.
- N The Matrix Spike sample recovery is not within control limits. See case narrative.
- S The reported value was determined by the Method of Standard Additions (MSA).
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- W The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.  
  - i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- + The correlation coefficient for the MSA is less than 0.995.
- Q See case narrative. One or more quality control criteria was outside the limits.

### **Organic Data Qualifiers**

- \* The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- A A tentatively identified compound, a suspected aldol-condensation product.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- C The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
- D The reported result is from a dilution.
- E The result is an estimated value.
- J The result is an estimated value.
- N The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
- P The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.  
  - i The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.

### **Additional Petroleum Hydrocarbon Specific Qualifiers**

- F The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
- L The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
- H The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
- O The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
- Y The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
- Z The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at [www.ALSGlobal.com](http://www.ALSGlobal.com) or at the accreditation bodies web site.

Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/analyte is offered by that state.

CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LOD	Limit of Detection
LOQ	Limit of Quantitation
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

<b>Analyte Name</b>	<b>Sample Result</b>	<b>Result</b>	<b>Spike Amount</b>	<b>% Rec</b>	<b>% Rec Limits</b>
Arsenic	56	276	250	88	70-130
Cobalt	0.75	107	125	85	70-130
Iron	4130	3830	250	-120 #	70-130
Manganese	38	137	125	80	70-130

Results flagged with an asterisk (\*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Matrix Spike and Matrix Spike Duplicate Data is presented for information purposes only. The matrix may or may not be relevant to samples reported in this report. The laboratory evaluates system performance based on the LCS and LCSD control limits.

**Laboratory Results for: Greene County Treatability**

Dear Masa,

Enclosed are the results of the sample(s) submitted to our laboratory July 25, 2023  
For your reference, these analyses have been assigned our service request number **K2308338**.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at [www.alsglobal.com](http://www.alsglobal.com). All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at [Mark.Harris@alsglobal.com](mailto:Mark.Harris@alsglobal.com).

Respectfully submitted,

**ALS Group USA, Corp. dba ALS Environmental**

**Date Received:** 07/25/2023

**CASE NARRATIVE**

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

**Sample Receipt:**

Nine water samples were received for analysis at ALS Environmental on 07/25/2023. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

**Metals:**

No significant anomalies were noted with this analysis.

Approved by \_\_\_\_\_

Date 08/04/2023

### SAMPLE DETECTION SUMMARY

This form includes only detections above the reporting levels. For a full listing of sample results, continue to the Sample Results section of this Report.

### Cooler Receipt and Preservation Form

Client Anchor Service Request K23 08338  
 Received: 7/25/23 Opened: 7/25/23 By: VMM Unloaded: 7/25/23 By: VMM

1. Samples were received via? **USPS** *Fed Ex* *UPS* *DHL* *PDX* **Courier** *Hand Delivered*
2. Samples were received in: (circle) **Cooler** *Box* *Envelope* *Other* *NA*
3. Were custody seals on coolers? *NA* **Y** *N* If yes, how many and where? \_\_\_\_\_  
 If present, were custody seals intact? **Y** *N* If present, were they signed and dated? **Y** *N*

Temp Blank	Sample Temp	IR Gun	Cooler #/COC ID / NA	Out of temp Indicate with "X"	PM Notified if out of temp	Tracking Number NA	Filed
1.6	0.6	TR06	Cooler 1				
5.3	4.5	↓	Cooler 2				

4. Was a Temperature Blank present in cooler? *NA* **Y** *N* If yes, notate the temperature in the appropriate column above:  
 If no, take the temperature of a representative sample bottle contained within the cooler; notate in the column "Sample Temp":
5. Were samples received within the method specified temperature ranges? *NA* **Y** *N*  
 If no, were they received on ice and same day as collected? If not, notate the cooler # above and notify the PM. **NA** *Y* *N*

If applicable, tissue samples were received: *Frozen* **Partially Thawed** *Thawed*

6. Packing material: *Inserts* **Baggies** *Bubble Wrap* *Gel Packs* **Wet Ice** *Dry Ice* *Sleeves* \_\_\_\_\_
7. Were custody papers properly filled out (ink, signed, etc.)? *NA* **Y** *N*
8. Were samples received in good condition (unbroken) *NA* **Y** *N*
9. Were all sample labels complete (ie, analysis, preservation, etc.)? *NA* **Y** *N*
10. Did all sample labels and tags agree with custody papers? *NA* **Y** *N*
11. Were appropriate bottles/containers and volumes received for the tests indicated? *NA* **Y** *N*
12. Were the pH-preserved bottles (see SMO GEN SOP) received at the appropriate pH? Indicate in the table below **NA** *Y* *N*
13. Were VOA vials received without headspace? Indicate in the table below **NA** *Y* *N*
14. Was C12/Res negative? **NA** *Y* *N*
15. Were samples received within the method specified time limit? If not, notate the error below and notify the PM **NA** *Y* *N*
16. Were 100ml sterile microbiology bottles filled exactly to the 100ml mark? **NA** *Y* *N* Underfilled Overfilled

Sample ID on Bottle	Sample ID on COC	Identified by:

Sample ID	Bottle Count	Bottle Type	Head-space	Broke	pH	Reagent	Volume added	Reagent Lot Number	Initials	Time

Notes, Discrepancies, Resolutions: Didn't ph due to low volume

## Miscellaneous Forms

**ALS Environmental—Kelso Laboratory**

### **Inorganic Data Qualifiers**

- \* The result is an outlier. See case narrative.
- # The control limit criteria is not applicable.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- E The result is an estimate amount because the value exceeded the instrument calibration range.
- J The result is an estimated value.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.
- H The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

### **Metals Data Qualifiers**

- # The control limit criteria is not applicable.
- J The result is an estimated value.
- E The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
- M The duplicate injection precision was not met.
- N The Matrix Spike sample recovery is not within control limits. See case narrative.
- S The reported value was determined by the Method of Standard Additions (MSA).
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- W The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.  
  - i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- + The correlation coefficient for the MSA is less than 0.995.
- Q See case narrative. One or more quality control criteria was outside the limits.

### **Organic Data Qualifiers**

- \* The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- A A tentatively identified compound, a suspected aldol-condensation product.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- C The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
- D The reported result is from a dilution.
- E The result is an estimated value.
- J The result is an estimated value.
- N The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
- P The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.  
  - i The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.

### **Additional Petroleum Hydrocarbon Specific Qualifiers**

- F The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
- L The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
- H The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
- O The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
- Y The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
- Z The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at [www.ALSGlobal.com](http://www.ALSGlobal.com) or at the accreditation bodies web site.

Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/analyte is offered by that state.

## Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LOD	Limit of Detection
LOQ	Limit of Quantitation
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Manganese	72 J	562	500	98	70-130

Results flagged with an asterisk (\*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Matrix Spike and Matrix Spike Duplicate Data is presented for information purposes only. The matrix may or may not be relevant to samples reported in this report. The laboratory evaluates system performance based on the LCS and LCSD control limits.

**Laboratory Results for: Greene County Treatability**

Dear Masa,

Enclosed are the results of the sample(s) submitted to our laboratory July 25, 2023  
For your reference, these analyses have been assigned our service request number **K2308339**.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at [www.alsglobal.com](http://www.alsglobal.com). All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at [Mark.Harris@alsglobal.com](mailto:Mark.Harris@alsglobal.com).

Respectfully submitted,

**ALS Group USA, Corp. dba ALS Environmental**

**Client:** Anchor QEA, LLC  
**Project:** Greene County Treatability  
**Sample Matrix:** Soil

**Service Request:** K2308339  
**Date Received:** 07/25/2023

**CASE NARRATIVE**

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier level IV requested by the client.

**Sample Receipt:**

Eight soil samples were received for analysis at ALS Environmental on 07/25/2023. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

**Metals:**

No significant anomalies were noted with this analysis.

### Cooler Receipt and Preservation Form

Client Anchor Service Request K23 08339  
Received: 7/25/23 Opened: 7/25/23 By: VMM Unloaded: 7/25/23 By: VMM

- 1. Samples were received via?  USPS  Fed Ex  UPS  DHL  PDX  Courier  Hand Delivered
- 2. Samples were received in: (circle)  Cooler  Box  Envelope  Other  NA
- 3. Were custody seals on coolers?  NA  Y  N If yes, how many and where? \_\_\_\_\_  
If present, were custody seals intact?  Y  N If present, were they signed and dated?  Y  N

Temp Blank	Sample Temp	IR Gun	Cooler #/COC ID / NA	Out of temp Indicate with "X"	PM Notified If out of temp	Tracking Number NA	Filed
1.6	0.6	TR06	Cooler 1				
5.3	4.5	↓	Cooler 2				

4. Was a Temperature Blank present in cooler?  NA  Y  N If yes, notate the temperature in the appropriate column above:  
If no, take the temperature of a representative sample bottle contained within the cooler; notate in the column "Sample Temp":

5. Were samples received within the method specified temperature ranges?  NA  Y  N  
If no, were they received on ice and same day as collected? If not, notate the cooler # above and notify the PM.  NA  Y  N

If applicable, tissue samples were received: *Frozen Partially Thawed Thawed*

6. Packing material: *Inserts Baggies Bubble Wrap Gel Packs Wet Ice Dry Ice Sleeves*

- 7. Were custody papers properly filled out (ink, signed, etc.)?  NA  Y  N
- 8. Were samples received in good condition (unbroken)  NA  Y  N
- 9. Were all sample labels complete (ie, analysis, preservation, etc.)?  NA  Y  N
- 10. Did all sample labels and tags agree with custody papers?  NA  Y  N
- 11. Were appropriate bottles/containers and volumes received for the tests indicated?  NA  Y  N
- 12. Were the pH-preserved bottles (see SMO GEN SOP) received at the appropriate pH? Indicate in the table below  NA  Y  N
- 13. Were VOA vials received without headspace? Indicate in the table below.  NA  Y  N
- 14. Was C12/Res negative?  NA  Y  N
- 15. Were samples received within the method specified time limit? If not, notate the error below and notify the PM  NA  Y  N
- 16. Were 100ml sterile microbiology bottles filled exactly to the 100ml mark?  NA  Y  N Underfilled Overfilled

Sample ID on Bottle	Sample ID on COC	Identified by:

Sample ID	Bottle Count Bottle Type	Head- space	Broke	pH	Reagent	Volume added	Reagent Lot Number	Initials	Time

Notes, Discrepancies, Resolutions: Dilut ph due to low volume

# Miscellaneous Forms

**ALS Environmental—Kelso Laboratory**

### **Inorganic Data Qualifiers**

- \* The result is an outlier. See case narrative.
- # The control limit criteria is not applicable.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- E The result is an estimate amount because the value exceeded the instrument calibration range.
- J The result is an estimated value.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.
- H The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

### **Metals Data Qualifiers**

- # The control limit criteria is not applicable.
- J The result is an estimated value.
- E The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
- M The duplicate injection precision was not met.
- N The Matrix Spike sample recovery is not within control limits. See case narrative.
- S The reported value was determined by the Method of Standard Additions (MSA).
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- W The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.  
  - i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- + The correlation coefficient for the MSA is less than 0.995.
- Q See case narrative. One or more quality control criteria was outside the limits.

### **Organic Data Qualifiers**

- \* The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- A A tentatively identified compound, a suspected aldol-condensation product.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- C The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
- D The reported result is from a dilution.
- E The result is an estimated value.
- J The result is an estimated value.
- N The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
- P The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- i The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.

### **Additional Petroleum Hydrocarbon Specific Qualifiers**

- F The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
- L The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
- H The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
- O The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
- Y The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
- Z The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at [www.ALSGlobal.com](http://www.ALSGlobal.com) or at the accreditation bodies web site.

Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/analyte is offered by that state.

## Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LOD	Limit of Detection
LOQ	Limit of Quantitation
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

**Laboratory Results for: Greene County Treatability**

Dear Masa,

Enclosed are the results of the sample(s) submitted to our laboratory July 25, 2023  
For your reference, these analyses have been assigned our service request number **K2308340**.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at [www.alsglobal.com](http://www.alsglobal.com). All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at [Mark.Harris@alsglobal.com](mailto:Mark.Harris@alsglobal.com).

Respectfully submitted,

**ALS Group USA, Corp. dba ALS Environmental**

for Mark Harris  
Project Manager

**Client:** Anchor QEA, LLC  
**Project:** Greene County Treatability  
**Sample Matrix:** Water

**Service Request:** K2308340  
**Date Received:** 07/25/2023

**CASE NARRATIVE**

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

**Sample Receipt:**

Nine water samples were received for analysis at ALS Environmental on 07/25/2023. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

**Metals:**

No significant anomalies were noted with this analysis.

**SMO:**

No significant anomalies were noted with this analysis.

Approved by \_\_\_\_\_

Date 08/02/2023

### Cooler Receipt and Preservation Form

Client Anchor Service Request K23 08340  
 Received: 7/25/23 Opened: 7/25/23 By: VMM Unloaded: 7/25/23 By: VMM

- Samples were received via? USPS Fed Ex UPS DHL PDX Courier Hand Delivered
- Samples were received in: (circle) Cooler Box Envelope Other NA
- Were custody seals on coolers? NA Y N If yes, how many and where? \_\_\_\_\_  
 If present, were custody seals intact? Y N If present, were they signed and dated? Y N

Temp Blank	Sample Temp	IR Gun	Cooler #/COC ID / NA	Out of temp indicate with "X"	PM Notified if out of temp	Tracking Number NA	Filed
<u>1.6</u>	<u>0.6</u>	<u>IB06</u>	<u>Cooler 1</u>				
<u>5.3</u>	<u>4.5</u>	<u>↓</u>	<u>Cooler 2</u>				

4. Was a Temperature Blank present in cooler? NA Y N If yes, notate the temperature in the appropriate column above:  
 If no, take the temperature of a representative sample bottle contained within the cooler; notate in the column "Sample Temp":

5. Were samples received within the method specified temperature ranges? NA Y N  
 If no, were they received on ice and same day as collected? If not, notate the cooler # above and notify the PM. NA Y N

If applicable, tissue samples were received: Frozen Partially Thawed Thawed

6. Packing material: Inserts Baggies Bubble Wrap Gel Packs Wet Ice Dry Ice Sleeves

- Were custody papers properly filled out (ink, signed, etc.)? NA Y N
- Were samples received in good condition (unbroken) NA Y N
- Were all sample labels complete (ie, analysis, preservation, etc.)? NA Y N
- Did all sample labels and tags agree with custody papers? NA Y N
- Were appropriate bottles/containers and volumes received for the tests indicated? NA Y N
- Were the pH-preserved bottles (see SMO GEN SOP) received at the appropriate pH? Indicate in the table below NA Y N
- Were VOA vials received without headspace? Indicate in the table below. NA Y N
- Was C12/Res negative? NA Y N
- Were samples received within the method specified time limit? If not, notate the error below and notify the PM NA Y N
- Were 100ml sterile microbiology bottles filled exactly to the 100ml mark? NA Y N Underfilled Overfilled

Sample ID on Bottle	Sample ID on COC	Identified by:

Sample ID	Bottle Count	Bottle Type	Head-space	Broke	pH	Reagent	Volume added	Reagent Lot Number	Initials	Time

Notes, Discrepancies, Resolutions: Dilut pH due to low volume

## Miscellaneous Forms

**ALS Environmental—Kelso Laboratory**

### **Inorganic Data Qualifiers**

- \* The result is an outlier. See case narrative.
- # The control limit criteria is not applicable.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- E The result is an estimate amount because the value exceeded the instrument calibration range.
- J The result is an estimated value.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.
- H The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

### **Metals Data Qualifiers**

- # The control limit criteria is not applicable.
- J The result is an estimated value.
- E The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
- M The duplicate injection precision was not met.
- N The Matrix Spike sample recovery is not within control limits. See case narrative.
- S The reported value was determined by the Method of Standard Additions (MSA).
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- W The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.  
  - i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- + The correlation coefficient for the MSA is less than 0.995.
- Q See case narrative. One or more quality control criteria was outside the limits.

### **Organic Data Qualifiers**

- \* The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- A A tentatively identified compound, a suspected aldol-condensation product.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- C The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
- D The reported result is from a dilution.
- E The result is an estimated value.
- J The result is an estimated value.
- N The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
- P The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.  
  - i The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.

### **Additional Petroleum Hydrocarbon Specific Qualifiers**

- F The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
- L The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
- H The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
- O The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
- Y The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
- Z The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at [www.ALSGlobal.com](http://www.ALSGlobal.com) or at the accreditation bodies web site.

Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/analyte is offered by that state.

## Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LOD	Limit of Detection
LOQ	Limit of Quantitation
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

**Laboratory Results for: Greene County Treatability**

Dear Masa,

Enclosed are the results of the sample(s) submitted to our laboratory July 25, 2023  
For your reference, these analyses have been assigned our service request number **K2308344**.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at [www.alsglobal.com](http://www.alsglobal.com). All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at [Mark.Harris@alsglobal.com](mailto:Mark.Harris@alsglobal.com).

Respectfully submitted,

**ALS Group USA, Corp. dba ALS Environmental**

Mark Harris

**Project:** Greene County Treatability  
**Sample Matrix:** Water

**Service Request:** K2308344  
**Date Received:** 07/25/2023

**CASE NARRATIVE**

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

**Sample Receipt:**

Nine water samples were received for analysis at ALS Environmental on 07/25/2023. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

**Metals:**

No significant anomalies were noted with this analysis.

Approved by \_\_\_\_\_

Date 08/03/2023

### Cooler Receipt and Preservation Form

Client Anchor Service Request K2308344  
Received: 7/25/23 Opened: 7/25/23 By: VM Unloaded: 7/25/23 By: VM

- 1. Samples were received via? USPS Fed Ex UPS DHL PDX Courier Hand Delivered
- 2. Samples were received in: (circle) Cooler Box Envelope Other NA
- 3. Were custody seals on coolers? NA Y N If yes, how many and where? \_\_\_\_\_  
If present, were custody seals intact? Y N If present, were they signed and dated? Y N

Temp Blank	Sample Temp	IR Gun	Cooler #/COC ID / NA	Out of temp Indicate with "X"	PM Notified If out of temp	Tracking Number NA	Filed
<u>1.6</u>	<u>0.6</u>	<u>IB06</u>	<u>Cooler 1</u>				
<u>5.3</u>	<u>4.5</u>	<u>↓</u>	<u>Cooler 2</u>				

4. Was a Temperature Blank present in cooler? NA Y N If yes, notate the temperature in the appropriate column above:  
If no, take the temperature of a representative sample bottle contained within the cooler; notate in the column "Sample Temp":

5. Were samples received within the method specified temperature ranges? NA Y N  
If no, were they received on ice and same day as collected? If not, notate the cooler # above and notify the PM. NA Y N  
If applicable, tissue samples were received: Frozen Partially Thawed Thawed

6. Packing material: Inserts Baggies Bubble Wrap Gel Packs Wet Ice Dry Ice Sleeves

- 7. Were custody papers properly filled out (ink, signed, etc.)? NA Y N
- 8. Were samples received in good condition (unbroken) NA Y N
- 9. Were all sample labels complete (ie, analysis, preservation, etc.)? NA Y N
- 10. Did all sample labels and tags agree with custody papers? NA Y N
- 11. Were appropriate bottles/containers and volumes received for the tests indicated? NA Y N
- 12. Were the pH-preserved bottles (see SMO GEN SOP) received at the appropriate pH? Indicate in the table below NA Y N
- 13. Were VOA vials received without headspace? Indicate in the table below. NA Y N
- 14. Was C12/Res negative? NA Y N
- 15. Were samples received within the method specified time limit? If not, notate the error below and notify the PM NA Y N
- 16. Were 100ml sterile microbiology bottles filled exactly to the 100ml mark? NA Y N Underfilled Overfilled

Sample ID on Bottle	Sample ID on COC	Identified by:

Sample ID	Bottle Count	Head-space	Broke	pH	Reagent	Volume added	Reagent Lot Number	Initials	Time

Notes, Discrepancies, Resolutions: Didn't pH due to low volume

## Miscellaneous Forms

**ALS Environmental—Kelso Laboratory**  
1317 South 13th Avenue, Kelso, WA 98626  
Phone (360) 577-7222 Fax (360) 425-9096  
[www.alsglobal.com](http://www.alsglobal.com)

### **Inorganic Data Qualifiers**

- \* The result is an outlier. See case narrative.
- # The control limit criteria is not applicable.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- E The result is an estimate amount because the value exceeded the instrument calibration range.
- J The result is an estimated value.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.
- H The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

### **Metals Data Qualifiers**

- # The control limit criteria is not applicable.
- J The result is an estimated value.
- E The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
- M The duplicate injection precision was not met.
- N The Matrix Spike sample recovery is not within control limits. See case narrative.
- S The reported value was determined by the Method of Standard Additions (MSA).
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- W The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.  
  - i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- + The correlation coefficient for the MSA is less than 0.995.
- Q See case narrative. One or more quality control criteria was outside the limits.

### **Organic Data Qualifiers**

- \* The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- A A tentatively identified compound, a suspected aldol-condensation product.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- C The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
- D The reported result is from a dilution.
- E The result is an estimated value.
- J The result is an estimated value.
- N The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
- P The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.  
  - i The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.

### **Additional Petroleum Hydrocarbon Specific Qualifiers**

- F The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
- L The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
- H The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
- O The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
- Y The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
- Z The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at [www.ALSGlobal.com](http://www.ALSGlobal.com) or at the accreditation bodies web site.

Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/analyte is offered by that state.

## Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LOD	Limit of Detection
LOQ	Limit of Quantitation
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

QA/QC Report

**Client:** Anchor QEA, LLC  
**Project:** Greene County Treatability/221114-05.02-Greene County-2023 & 2024  
Task 06  
**Sample Matrix:** Water

**Service Request:** K2308344

**Date Analyzed:** 08/03/23

**Lab Control Sample Summary**  
**Dissolved Metals**

**Units:**ug/L

**Basis:**NA
